

Amphenol Spectra-Strip  
720 Sherman Ave.  
Hamden,CT 06514

---

## RoHS Certification

Amphenol Spectra-Strip's is committed to conserving natural resources by reusing or recycling materials and developing, manufacturing, and marketing cable products that are safe for their intended use and protective of the environment.

To meet these objectives Amphenol Spectra-Strip has established its Spectra-Green process, which has instituted requirements for the cable products that we sell. These requirements are based, at a minimum, on WEEE (Waste from Electrical and Electronic Equipment), the Reduction of Hazardous Substances (RoHS), and Proposition 65 in California.

Amphenol Spectra-Strip and its suppliers incorporates the best engineering and scientific judgment, including the use of engineering calculations, materials assays, or a combination thereof, to determine the existence and concentrations of the substances set forth in this specification. In some cases, commodities may be tested for verification. At a minimum, the applicable MSDS sheets will be kept on file.

All standard products have been reviewed and actions, where warranted, have been undertaken to confirm our products conform to the requirements per Directive 2002/95/EC of the European Parliament and of the council of 27 January 2003, on the restriction of the use of certain hazardous substances in electrical and electronic equipment as of June 30, 2005. Based on this directive, the following substances will not be intentionally added to the products:

Cadmium (Cd)  
Hexavalent Chromium (Cr)  
Lead (Pb)  
Mercury (Hg)  
Polybrominated biphenyl (PBB)  
Polybrominated diphenyl ether (PBDE).

The maximum limits based on this directive are 100 PPM for Cadmium and 1000 PPM for the remainder of the substances.
