Subject: Halogen Free Connectors

Bel Fuse MagJack® Connector Customers,

If you are a customer of the following Bel MagJack® ICM connectors rated as “Halogen Free”, please note that, Bel may be required to substitute halogenated plastic blends for a limited time in order to meet committed ship dates.

Due to global supply issues related to DuPont HTN (High Temperature Nylon), plastic suppliers are failing to deliver and cancelling orders, claiming force majeure. These cancellations threaten currently committed orders for the listed parts. Bel has secured supply of substitute DuPont material, but in more readily available blends that are not “Halogen Free” rated. This is a temporary measure and Bel hopes to return to Halogen Free material in the September/October time frame.

This plastic is used for the main connector housing. Bel will maintain records of material used by part number and production date code, though no special markings will be supplied on the product or packaging material, nor will product specifications be updated.

No action is required on your part to continue receiving product with this substitution. If this substitution is unacceptable, please contact your Bel customer service or sales contact and we will allow you to reschedule your order to when the original material is available.

We will provide timely updates as conditions warrant.

As always, we appreciate your business, and look forward to working through this challenge together.

Sincerely,

Your Bel / TRP ICM Team
