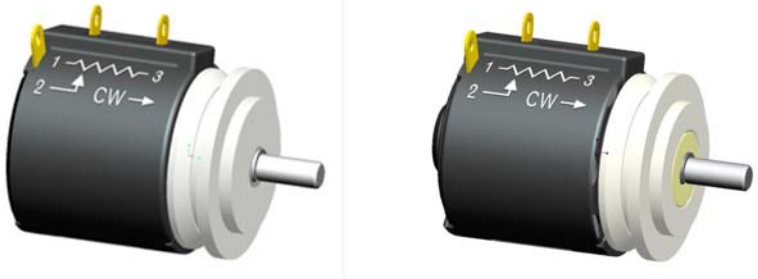
Bourns Sensors & Controls Product Line Introduces Model 3549 Product Enhancements

In line with our commitment to product excellence and continuous improvement, Bourns Sensors & Controls Product Line is pleased to introduce product enhancements to the Bourns® Model 3549 10-Turn Precision Potentiometer Series with a servo lid.

The current process for attaching the servo lid involves a mechanical rivet on the lid that attaches to the potentiometer housing. The new process will entail screwing the servo lid onto the potentiometer bushing. The servo lid will also be glued to the front mounting surface of the potentiometer. This modification is designed to increase reliability.



Current Design *Proposed Design*

The appearance of the Model 3549 will be different but the fit and function will not be impacted. Qualification test data is available upon request.

Implementation dates are as follows:

Evaluation samples will be available: ***December, 2012***

First date code using above changes: ***1306M***

Delivery of such products will begin: ***February 12, 2013***

Should you have any questions or need additional information, please contact Customer Service/Inside Sales.
