

Accuris has added the following environmental document to the active parts as mentioned in the document from Carlo Gavazzi Holding Ag as of 16-February-2018.

Thank You.

REACH DECLARATION

According to the REGULATION (EC) No. 1907/2006 of Dec 18th, 2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) and relevant amendments, chemical substances imported in more than 1 ton/year shall be registered by the producer/importer. Substances are intended as used in their own, or in preparations, or intentionally released by finished products.

With reference to the REACH regulation and with regard to the devices manufactured by Carlo Gavazzi, we are considered as follows:

- 1) Producer of articles
- 2) Downstream user of chemical substances (e.g. in production processes)

1) As producers of articles we do not need to register any substances, taking into consideration the following rule:

The registration requirement under the REACH Regulation according to article 7(1) applies to substances in articles for which ALL the following conditions are met:

- the substance is intended to be released under normal and reasonable foreseeable conditions of use;
- the total amount of the substances present in the articles exceeds one tonne per producer or importer per year;
- the substance has not yet been registered for this use.

Our articles do not release intentionally any dangerous substance.

Moreover, our articles do not contain any of the restricted substances listed in annex XVII of REACH.

2) As downstream users, we are taking care of the safety precautions for use on chemicals and we require our suppliers to provide only chemicals (resins, fluxants for soldering, ...) registered according to REACH.

With reference to the SVHC (Substances of Very High Concern), which list is updated in ECHA website every six months, articles produced by our factories do not intentionally contain any of these substances in percentage > 0,1% in weight of finished product (or weight of each article composing it, in case of complex product).

This evaluation is based on ECHA list dated January 15th, 2018.

Lainate, February 16th, 2018
