

Date: May 1, 2014
To: Eaton's Electronics PowerStor Supercapacitor Customers
Subject: Product Change Notice – Multi-Cell Construction

Dear Valued Customer:

Effective August 1, 2014, Eaton is implementing construction changes on its PowerStor supercapacitor multi-cell constructions for the specific parts numbers listed in the following pages of this notice.

The change removes a redundant layer of UV epoxy between the rubber seal and the PCB. This change will not affect the parts' form, fit, function, electrical properties, processing requirements or ordering. Any inventory of the specified parts is still saleable product and should not be returned.

If you have any question about this product change, please contact your local Eaton representative. Qualification data is available upon request if required.

Regards,

Jason Lee
Global Product Manager
Eaton
Electronics Division
