Description

The FOD8163 series is a 3.3 V / 5 V high-speed logic gate optocoupler with open-collector output, which supports isolated communications allowing digital signals to communicate between systems without conducting ground loops or hazardous voltages.

The FOD8163 series utilizes stretched body package to achieve 8 mm creepage and clearance distances (FOD8163T), and optimized IC design to achieve reliably high-insulation voltage and high-noise immunity.

The FOD8163 series consists of an aluminium gallium arsenide (AlGaAs) light emitting diode and an integrated high-speed photodetector. The output of the detector IC is an open collector schottky-clamped transistor. The electrical and switching characteristics are guaranteed over the extended industrial temperature range of -40°C to 100°C and a V_{CC} range of 3 V to 5.5 V.

Notes:

- t_{PSK} is equal to the magnitude of the worst-case difference in t_{PHL} and/or t_{PLH} between any two units from the same manufacturing date code that are operated at same case temperature ($\pm 5^\circ\text{C}$), at same operating conditions, with equal loads ($R_L = 350\ \Omega$, $C_L = 15\text{ pF}$), and with an input rise time less than 5 ns.
- Common-mode transient immunity at output HIGH is the maximum tolerable positive dV_{cm}/dt on the leading edge of the common-mode impulse signal, V_{CM} , to assure that the output remains HIGH. Common-mode transient immunity at output LOW is the maximum tolerable negative dV_{cm}/dt on the trailing edge of the common pulse signal, V_{CM} , to assure that the output remains LOW.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Terms of Use

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.
