

MOUNTING DIMENSIONS (For reference only)

SS9

FEATURES

- Single current sinking or current sourcing linear output
- Improved temperature stability
- Three pin in-line printed circuit board terminals
- Standard .100" mounting centers
- Laser trimmed thin film and thick film resistors minimize sensitivity variations and compensate for temperature variations
- Flux range of ± 100 to ± 2500 gauss

OPERATION

The SS9 utilizes a Hall effect integrated circuit chip which provides increased temperature stability and performance. Laser trimmed thick film resistors on the ceramic substrate and thin film resistors on the integrated circuit reduce null and gain shifts over temperature which results in consistent sensitivity from one device to the next.

* -40° to 125°C.

MilliTesla = Gauss 10^{-1}

** Excludes load. Typical at 25°C/Maximum at -40°C.

*** @ $V_s = 5$ VDC for SS94A1B only/@ $V_s = 8$ VDC for all others.

† Derived from straight line between end points.

†† Silver coating on back of ceramic is electrically connected to - terminal. Specified using a 2.2K Ω resistor unless otherwise noted.

Null voltage (Vout at 0 gauss) and sensitivity are ratiometric to supply voltage.

Application consideration: The output is clamped at the high end. Clamping voltage may be as low as 9VDC. The output will not exceed the clamping voltage regardless of field strength or supply voltage.
