

Description

The 9FGV1001 is a member of IDT's PhiClock™ programmable clock generator family. The 9FGV1001 provides four non-spread spectrum copies of a single output frequency and two copies of the crystal reference input. Two select pins allow for hardware selection of the desired configuration, or two I²C bits allow easy software selection of the desired configuration. The user may configure any one of the four OTP configurations as the default when operating in I²C mode. Four unique I²C addresses are available, allowing easy I²C access to multiple components.

Typical Applications

- HPC
- Storage
- 10G/25G Ethernet
- Fiber Optic Modules
- SSDs

Output Features

- 4 programmable output pairs plus 2 LVCMOS REF outputs
- 1 integer output frequency per configuration
- 10MHz–325MHz output frequency (LVDS or LP-HCSL output configuration)
- 10MHz–200MHz output frequency (LVCMOS output configuration)

Block Diagram

Features

- 1.8V–3.3V core V_{DD} and V_{DDREF}
- Individual 1.8V–3.3V V_{DDO} for each programmable output pair
- Supports HCSL, LVDS and LVCMOS I/O standards
- Supports LVPECL and CML logic with easy AC coupling – see application note [AN-891](#) for alternate terminations
- HCSL utilizes IDT's LP-HCSL technology for improved performance, lower power and higher integration:
 - Programmable output impedance of 85 or 100Ω
- On-board OTP supports up to 4 complete configurations
- Configuration selected via strapping pins or I²C
- < 125mW at 1.8V, < 230mW at 3.3V with outputs running at 100MHz
- 4 programmable I²C addresses: D0/D1, D2/D3, D4/D5, D6/D7 read/write
- Supported by IDT [Timing Commander™](#) software
- 4 × 4 mm 24-VFQFPN; minimal board space

Key Specifications

- 259fs rms typical phase jitter outputs at 156.25MHz (12kHz–20MHz)
- PCIe Gen1–4 compliant

PCIe Clocking Architectures Supported

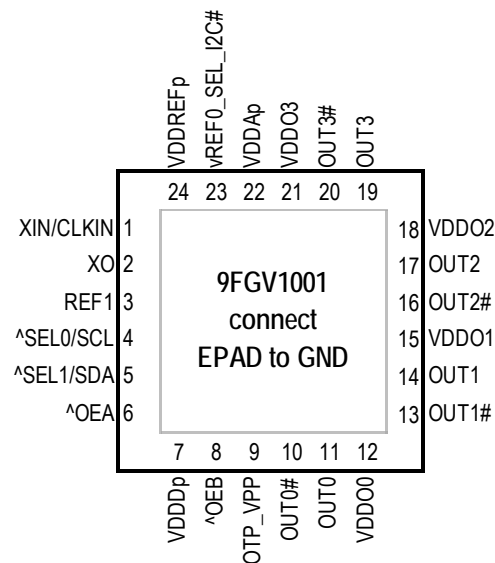

- Common Clocked (CC)
- Independent Reference without spread spectrum (SRnS)

Pin Descriptions

Table 2. Pin Descriptions

Number	Name	Type	Description
1	XIN/CLKIN	Input	Crystal input or reference clock input.
2	XO	Output	Crystal output.
3	REF1	Output	LVC MOS reference output.
4	^SEL0/SCL	Input	Select pin for internal frequency configurations/I ² C clock pin. Function is determined by state of SEL_I2C# upon power-up. This pin has an internal pull-up.
5	^SEL1/SDA	I/O	Select pin for internal frequency configurations/I ² C data pin. Function is determined by state of SEL_I2C# upon power-up. This pin has an internal pull-up.
6	^OEA	Input	Active high input for enabling outputs. This pin has an internal pull-up resistor. 0 = disable outputs, 1 = enable outputs.

Table 2. Pin Descriptions (Cont.)

Number	Name	Type	Description
7	V _{DDDp}	Power	Digital power. 1.8V to 3.3V. V _{DDAp} and V _{DDDp} should be connected to the same power supply.
8	^OE _B	Input	Active high input for enabling outputs. This pin has an internal pull-up resistor. 0 = disable outputs, 1 = enable outputs.
9	OTP_VPP	Power	Voltage for programming OTP. During normal operation, this pin should be connected to the same power rail as V _{DDD} .
10	OUT0#	Output	Complementary output clock 0.
11	OUT0	Output	Output clock 0.
12	V _{DDO0}	Power	Power supply for output 0.
13	OUT1#	Output	Complementary output clock 1.
14	OUT1	Output	Output clock 1.
15	V _{DDO1}	Power	Power supply for output 1.
16	OUT2#	Output	Complementary output clock 2.
17	OUT2	Output	Output clock 2.
18	V _{DDO2}	Power	Power supply for output 2.
19	OUT3	Output	Output clock 3.
20	OUT3#	Output	Complementary output clock 3.
21	V _{DDO3}	Power	Power supply for output 3.
22	V _{DDAp}	Power	Power supply for analog circuits. V _{DDAp} and V _{DDDp} should be connected to the same power supply. Programmable for nominal voltages of 1.8V, 2.5V or 3.3V.
23	vREF0_SEL_I2C#	Latched I/O	Latched input/LVCMOS output. At power-up, the state of this pin is latched to select the state of the I ² C pins. After power-up, the pin acts as an LVCMOS reference output. This pin has an internal pull-down. 1 = SEL0/SEL1. 0 = SCL/SDA.
24	V _{DDREFp}	Power	Power supply for REF0 and REF1 and the internal XO. Programmable to 1.8V, 2.5V or 3.3V.
25	EPAD	GND	Connect to ground.

Note: Unused outputs can be programmed off and left floating. V_{DDREF} and V_{DDO0} have to be connected.

Absolute Maximum Ratings

The absolute maximum ratings are stress ratings only. Stresses greater than those listed below can cause permanent damage to the device. Functional operation of the 9FGV1001 at absolute maximum ratings is not implied. Exposure to absolute maximum rating conditions may affect device reliability.

Table 3. Absolute Maximum Ratings

Parameter	Rating

¹ Measured from single-ended waveform.

² Measured from differential waveform.

³ Measured from -150mV to +150mV on the differential waveform (derived from REFCLK+ minus REFCLK-). The signal must be monotonic through the measurement region for rise and fall time. The 300mV measurement window is centered on the differential zero crossing.

⁴ Measured at crossing point where the instantaneous voltage value of the rising edge of REFCLK+ equals the falling edge of REFCLK-.

⁵ Refers to the total variation from the lowest crossing point to the highest, regardless of which edge is crossing. Refers to all crossing points for this measurement.

⁶ Defines as the absolute minimum or maximum instantaneous period. This includes cycle to cycle jitter, relative ppm tolerance, and spread spectrum modulation.

⁷ Defined as the maximum instantaneous voltage including overshoot.

⁸ Defined as the minimum instantaneous voltage including undershoot.

⁹ Defined as the total variation of all crossing voltages of rising REFCLK+ and falling REFCLK-. This is the maximum allowed variance in V_{CROSS} for any particular system.

¹⁰ Refer to section 4.3.7.1.1 of the PCI Express Base Specification, Revision 3.0 for information regarding ppm considerations.

¹¹ System board compliance measurements must use the test load. REFCLK+ and REFCLK- are to be measured at the load capacitors CL. Single ended probes must be used for measurements requiring single ended measurements. Either single ended probes with math or differential probe can be used for differential measurements. Test load $C_L = 2pF$.

¹² T_{STABLE} is the time the differential clock must maintain a minimum $\pm 150mV$ differential voltage after rising/falling edges before it is allowed to droop back into the $VRB \pm 100mV$ differential range.

¹³ ppm refers to parts per million and is a DC absolute period accuracy specification. 1 ppm is 1/1,000,000th of 100.000000MHz exactly or 100Hz. For 300ppm, then we have an error budget of $100Hz/ppm \times 300 ppm = 30kHz$. The period is to be measured with a frequency counter with measurement window set to 100ms or greater. The $\pm 300 ppm$ applies to systems that do not employ spread spectrum clocking, or that use common clock source. For systems employing spread spectrum clocking, there is an additional 2,500 ppm nominal shift in maximum period resulting from the 0.5% down spread resulting in a maximum average period specification of +2,800 ppm.

¹⁴ Matching applies to rising edge rate for REFCLK+ and falling edge rate for REFCLK-. It is measured using a $\pm 75mV$ window centered on the median cross point where REFCLK+ rising meets REFCLK- falling. The median cross point is used to calculate the voltage thresholds the oscilloscope is to use for the edge rate calculations. The rise edge rate of REFCLK+ should be compared to the fall edge rate of REFCLK-; the maximum allowed difference should not exceed 20% of the slowest edge rate.

¹⁵ At default amplitude settings.

¹⁶ Guaranteed by design and characterization.

January 31, 2018	<ul style="list-style-type: none"> ▪ Updated drive level parameter in <i>Crystal Characteristics</i> table. ▪ Updated <i>Package Outline Drawings</i> text and added hyperlink to document.
October 5, 2017	Initial release.

NOTES:

1. ALL DIMENSIONING AND TOLERANCING CONFORM TO ANSI Y14.5M-1994
2. ALL DIMENSIONS ARE IN MILLIMETERS
3. INDEX AREA PIN 1 IDENTIFIER

RECOMMENDED LAND PATTERN DIMENSION

NOTES:

1. ALL DIMENSIONING AND TOLERANCING CONFORM TO ANSI Y14.5M-1994
2. ALL DIMENSIONS ARE IN MILLIMETERS
3. LAND PATTERN RECOMMENDATION PER IPC-7351B GENERIC REQUIREMENT FOR SURFACE MOUNT DESIGN AND LAND PATTERN

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
