

C44U-T, 900 – 1,800 VDC, Long Lifetime, High Temperature and THB

Overview

The C44U-T series is a polypropylene metallized film capacitor with a cylindrical, aluminium can-type design, filled with solid resin. It uses screw terminals for high current and a plastic deck.

Applications

Typical applications include DC link for renewable energy, traction, industrial drives and energy storage.

Benefits

- Long lifetime up to 300,000 hours
- High temperature up to 105°C Hot Spot
- Harsh-environmental conditions - 85°C/85% R.H. and Vr for 1000h
- Good self-healing properties
- Low power losses
- High ripple current withstanding
- High capacitance density

Part Number System

C4	4	U	Q	G	T	7	1	1	0	T	5	3	K	V143
Series		DC Voltage	Case and Fixing	Terminals Code	Capacitance Code (pF)	Variants		Case Diameter	Case Height	Tolerance	C-Spec			
C4 = MKP Capacitors for Power Applications	4 = Cylindrical types	U = DC Link	O = 900 V Q = 1,100 V U = 1,300 V S = 1,500 V V = 1,800 V	G = Cylindrical case with threaded bolt M12 E = Cylindrical case without threaded bolt	T = M6 female terminals Q = M8 male terminals	Digits nine, ten, and eleven indicate the first three digits of capacitance value. Digit 8 indicates the number of zeros to be added.		T = Standard Other symbol = Special	8 = 85 mm 5 = 116 mm 3 = 136 mm	1 . . . Z	J = ±5% K = ±10%	V143 = Standard for traction application UNI EN 45545-2: 2015 Blank = Not inline with the traction application standard.		

It is not possible to manufacture every part number that can be created from the coding description. Please refer to the table of standard part numbers above and contact KEMET for other possibilities .

Dimensions – Millimeters

Style 1: D = 85 mm

Style 2: D = 116 mm and 136 mm

Qualifications

Reference Standards	IEC 61071 - EN61071 - VDE0560 – UL810 Construction only - E208772
Reference Standard for traction applications	According to UNI EN 45545-2: 2015 for Hazard Levels HL1 - HL2 for Requirements Set R22 and Hazard Levels HL1 - HL2 - HL3 for Requirements Set R23 Available with C-spec
Climatic Category	40/85/56
Damp Heat	IEC 60068-2-78
Change of Temperature	IEC 60068-2-14
Vibration Strength	IEC 60068-2-6

General Technical Data

Dielectric	Polypropylene Metallized Film, non-inductive type, self-healing property
Application	DC Filtering/DC Link
Operational Temperature Range for can diameter 85 and 116mm	-40°C to 105°C
Operational Temperature Range for can diameter 136mm	-40°C to 90°C
Voltage Deratings	- Rated voltage up to T _{hs} of 90°C (all diameters) - Voltage derating of 2% per °C for T _{hs} 90°C ÷ 95°C (for can diameter 85 and 116 mm only) - Voltage derating of 2.5% per °C for T _{hs} 95°C ÷ 105°C (for can diameter 85 and 116 mm only)
Harsh-Environmental Withstanding	1,000 hours at V _R , 85°C, 85% Relative Humidity Capacitance change ($\Delta C/C$): $\leq 10\%$
Protection	Aluminium case with or without, threaded bolt M12 Plastic deck flame retardant execution UL 94 V-0 Plastic cap flame retardant execution UL 94 V-0 Thermosetting resin sealing
Installation	Any position
Leads	High current M6 or M8 terminals
Packaging	Packed in cardboard boxes with protection for the terminals
RoHS Compliant	Compliant with Directive 2002/95/EC and Directive 2011/65/EU of the European Parliament and of the Council on 8 June 2011, including Commission Delegated Directive (EU) 2015/863 amending Annex II to Directive 2011/65/EU.

Electrical Characteristics

Capacitance Tolerance	$\pm 10\%$ at $+25^{\circ}\text{C} \pm 5^{\circ}\text{C}$
Dielectric Dissipation Factor (DF)	≤ 0.0002 at 10 kHz with $T = 25^{\circ}\text{C} \pm 5^{\circ}\text{C}$
Surge Voltage	$1.5 \times V_{\text{NDC}}$ for maximum 10 times in lifetime at $+25^{\circ}\text{C} \pm 5^{\circ}\text{C}$
Over-Voltage (IEC 61071)	$1.15 \times V_{\text{NDC}}$ for maximum 30 minutes, once per day
	$1.3 \times V_{\text{NDC}}$ for maximum 1 minute, once per day
Peak Non-Repetitive Current	$1.5 \times I_{\text{pkf}}$ maximum 1,000 times in lifetime
Insulation Resistance	$IR \times C \geq 30,000$ seconds at 100 VDC 1 minute at $+25^{\circ}\text{C} \pm 5^{\circ}\text{C}$
Capacitance Deviation in Operation	$\pm 1.5\%$ maximum on capacitance value measured at $+25^{\circ}\text{C}$
Storage Ambient Temperature Limits	-40 to $+85^{\circ}\text{C}$

Test Method

Test Voltage Between Terminals	$1.5 \times U_{\text{NDC}}$ for 10 seconds or $1.65 \times V_{\text{NDC}}$ for 2 seconds at 25°C
Test Voltage Between Terminals and Case	4.0 kVAC 50 Hz for 2 seconds

Style 2 Diameter 116 & 136 mm

Environmental Compliance

As a leading global supplier of electronic components and an environmentally conscious company, KEMET continually aspires to improve the environmental effects of our manufacturing processes and our finished electronic components.

In Europe (RoHS Directive) and in some other geographical areas such as China (China RoHS), legislation has been enacted to prevent or otherwise limit the use of certain hazardous materials, including lead (Pb), in electronic equipment. KEMET monitors legislation globally to ensure compliance and endeavors to adjust our manufacturing processes and/or electronic components as may be required by applicable law.

For military, medical, automotive, and some commercial applications, the use of lead (Pb) in the termination is necessary and/or required by design. KEMET is committed to communicating RoHS compliance to our customers. Information related to RoHS compliance will be provided in data sheets and using specific identifiers on the packaging labels.

All KEMET power film capacitors are RoHS compliant.

Materials & Environment

The selection of raw materials that KEMET uses for the production of its electronic components is the result of extensive experience. KEMET directs specific attention toward environmental protection. KEMET selects its suppliers according to ISO 9001 standards and performs statistical analyses on raw materials before acceptance for use in manufacturing our electronic components. All materials are, to the best of KEMET's knowledge, non-toxic and free from cadmium; mercury; chrome and compounds; polychlorine triphenyl (PCB); bromide and chlorinedioxins bromurate clorurate; CFC and HCFC; and asbestos.

Sealing

Hermetically Sealed Capacitors

As the temperature increases, the pressure inside the capacitor increases. If the internal pressure is high enough, it can cause a breach in the capacitor. Such a breach can result in leakage, impregnation, filling fluid, or moisture susceptibility.

Barometric Pressure

The altitude at which hermetically sealed capacitors are operated controls the capacitor's voltage rating. As the barometric pressure decreases, the susceptibility to terminal arc-over increases. Non-hermetic capacitors can be affected by internal stresses due to pressure changes. These effects can be in the form of capacitance changes, dielectric arc-over, and/or low insulation resistance. Altitude can also affect heat transfer. Heat that is generated in an operation cannot be dissipated properly, and high $R\theta^2$ losses and eventual failure can result.

KEMET Electronics Corporation Sales Offices

Disclaimer

YAGEO Corporation and its affiliates do not recommend the use of commercial or automotive grade products for high reliability applications or manned space flight.

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.
