

Product / Process Change Notification DJON-7EKUHF

Notice Date: 05/12/2008

Product Category: Compilers

Notification Subject: FLASH write routine patch for 16-bit libraries

Notification Body:

Modifications have been made to the 16-bit MPLAB C libraries for the self-programming routines `_write_flash16` and `_write_flash24` in the libraries `libpic30-coff.a` and `libpic30-elf.a`.

Previously, these routines did not implement a workaround for the device ID errata that affects some members of the dsPIC33F and PIC24H device families. To correct this, download, unzip and add the source file in "Patch for FLASH Write Functions" to the project (download at www.microchip.com/c30).

These corrected functions will be included in the libraries of v3.10b of the MPLAB C Compiler for PIC24 MCUs and dsPIC DSCs (to be posted later this week).
