

75W, specific power supply for power grid

UL62368-1

Report EN62368-1

CB IEC62368-1

UK CA BS EN 62368-1

RoHS 3 years Warranty

FEATURES

- Specific power supply designing for smart grid
- Universal 85-264VAC or 88-370VDC input voltage
- Ultra-wide operating ambient temperature range: -40°C to +85°C
- High reliability, low output ripple & noise
- Immunity meets electricity standard Level 4
- Meets impulse voltage requirements of 1.2/50us 5KV

LO75-20BxxE series is a special power supply design for the smart grid industry that meets the power industry standards. It features AC input and at the same time accepts DC input voltage, wide operating temperature range, high EMS level, high reliability, and high isolation. EMC and safety specifications meet IEC/EN61000-4, CISPR32/EN55032, UL/EN/IEC62368 standards. It is suitable for smart grid occasions with poor power quality and high reliability requirements, such as smart power transmission and substations. It also can be used in microcomputer protection equipment, bus voltage protection equipment or equipment with high reliability requirements that require 110VDC input voltage.

Selection Guide

Product Characteristic Curve

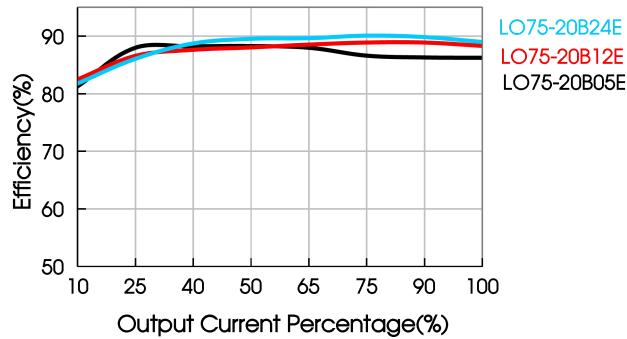

Note: ① With an AC input between 85-100VAC, the output power must be derated as per temperature derating curves;
② This product is suitable for applications using convection air cooling; for applications in closed environment please consult Mornsun FAE.

Output Filter Components:

We recommend using an electrolytic capacitor with high frequency, and low ESR rating for C2 (refer to manufacturer's datasheet). Choose a capacitor voltage rating with at least 20% margin, in other words not exceeding 80%. C1 is a ceramic capacitor used for filtering high-frequency noise and TVS is a recommended suppressor diode to protect the application in case of a converter failure.
