

POWERMITE™ Low Noise 1 Watt Zener Diodes

DESCRIPTION

This Microsemi Powermite® surface mount low noise Zener package series provides a higher power handling capability than are also RoHS compliant. In addition to its size advantages, Powermite® package features include a full-metallic bottom that eliminates the possibility of solder flux entrapment during assembly, and a unique locking tab acts as an efficient heat path from die to mounting plane for external heat sinking with very low thermal resistance junction to case (bottom). Its innovative design makes this device ideal for use with automatic insertion equipment.

NOTE 1: Product shown has a standard tolerance of ±5% on the nominal Zener voltage. Also available in 2% tolerance with suffix C. V_Z is measured at I_{ZT} with T_c (TAB 1) at 30°C.

NOTE 2: Zener impedance is derived by superimposing on I_{ZT} a 60 Hz rms ac current equal to 10% of I_{ZT} (25 μA ac).

NOTE 3: Based on 1 W maximum power dissipation before any derating. Allowance has been made for higher voltage with operation at higher currents and temperature. For determination of voltage change with current deviations from I_{ZT} see [MicroNote 202](#).

FIGURE 1 – Noise Density Measurement Circuit

Noise density, (N_D) is specified in microvolt-rms per square-root-hertz. Actual measurement is performed using a 1 KHz to 3 KHz frequency bandpass filter at a constant Zener test current (I_{ZT}) at 25 °C ambient temperature. N_D is calculated from the formula.
