BLM18H series has a modified internal electrode structure, that minimizes stray capacitance and increases the effective frequency range.

#### Features

0.8±0.

: Electrode

(in mm)

- 1. BLM18H series realizes high impedance at 1GHz and is suitable for noise suppression from 500MHz to GHz range. The impedance value of HG/HD-type is about three times as large as that of A/B-type at 1GHz though the impedance characteristic of HG/HD-type is similar to A/B-type at 100MHz or less.
- HG-type is effective in noise suppression in wide frequency range (several MHz to several GHz).
  HD-type for high-speed signal line provides a sharper roll-off after the cut off frequency.
- 3. The magnetic shielded structure minimizes cross talk.
