

## NDH832P

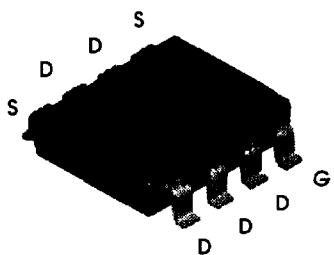

### P-Channel Enhancement Mode Field Effect Transistor

#### General Description

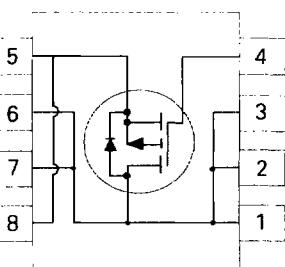

These P-Channel enhancement mode power field effect transistors are produced using National's proprietary, high cell density, DMOS technology. This very high density process is especially tailored to minimize on-state resistance and provide superior switching performance. These devices are particularly suited for low voltage applications such as notebook computer power management and other battery powered circuits where fast switching, low in-line power loss, and resistance to transients are needed.

#### Features

- -4.2A, -20V.  $R_{DS(ON)} = 0.06\Omega$  @  $V_{GS} = -4.5V$   
 $R_{DS(ON)} = 0.08\Omega$  @  $V_{GS} = -2.7V$ .
- High density cell design for extremely low  $R_{DS(ON)}$ .
- Enhanced SuperSOT™-8 small outline surface mount package with high power and current handling capability.

Notes:

1.  $R_{\text{JJA}}$  is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins.  $R_{\text{JJA}}$  is guaranteed by design while  $R_{\text{CCA}}$  is determined by the user's board design.

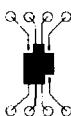

$$P_D(t) = \frac{T_f - T_A}{R_{\text{JJA}}(t)} = \frac{T_f - T_A}{R_{\text{JJA}} + R_{\text{CCA}}(t)} = I_D^2(t) \times R_{DSOM@T_J}$$

Typical  $R_{\text{JJA}}$  using the board layouts shown below on 4.5" x 5" FR-4 PCB in a still air environment:

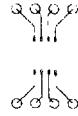

- a. 70°C/W when mounted on a 1 in<sup>2</sup> pad of 2oz copper.
- b. 125°C/W when mounted on a 0.026 in<sup>2</sup> pad of 2oz copper.
- c. 135°C/W when mounted on a 0.005 in<sup>2</sup> pad of 2oz copper.
