Functional Description

The 'AC/'ACT821 consists of ten D-type edge-triggered flip-flops. The buffered Clock (CP) and buffered Output Enable (\overline{OE}) are common to all flip-flops. The flip-flops will store the state of their individual D inputs that meet the setup and hold time requirements on the LOW-to-HIGH CP transition. With \overline{OE} LOW the contents of the flip-flops are available at

the outputs. When \overline{OE} is HIGH the outputs go to the high impedance state. Operation of the \overline{OE} input does not affect the state of the flip-flops.

The 'AC/'ACT821 is functionally and pin compatible with the AM29821.

Function Table

Inputs			Internal	Outputs	Function
\overline{OE}	CP	D	Q	O	
H	/	L	L	Z	High Z
H	/	H	H	Z	High Z
L	/	L	L	L	Load
L	/	H	H	H	Load

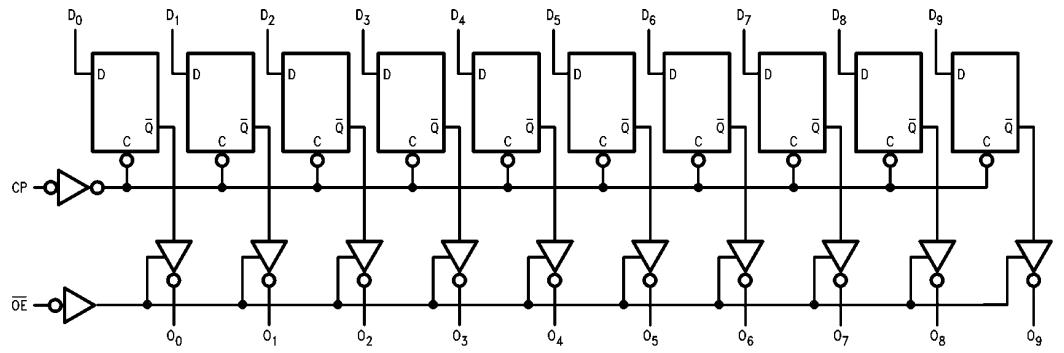

H = HIGH Voltage Level

L = LOW Voltage Level

Z = HIGH Impedance

/ = LOW-to-HIGH Clock Transition

Note 1: Absolute maximum ratings are those values beyond which damage to the device may occur. The databook specifications should be met, without exception, to ensure that the system design is reliable over its power supply, temperature, and output/input loading variables. National does not recommend operation of FACT™ circuits outside databook specifications.
