

## DM74ALS29827 10-Bit Buffers and Bus Drivers with TRI-STATE® Outputs

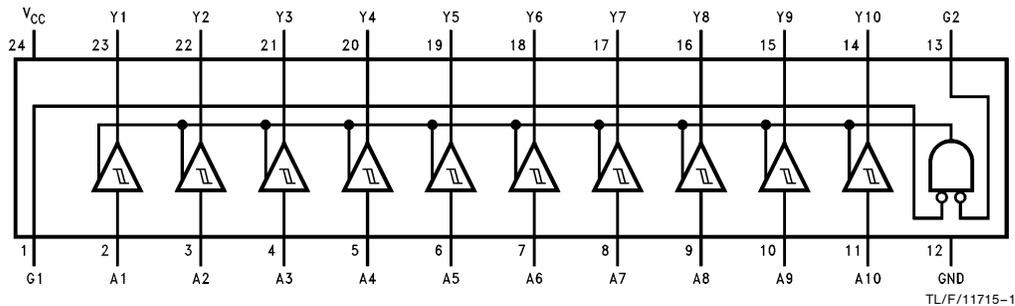

### General Description

This 10-bit buffer/bus driver is designed for bus interfacing or busses with parity. The inputs include hysteresis which provides improved noise rejection. The device can be disabled when either controls (G1, G2) is at high; and the buses are effectively isolated.

### Features

- Advanced oxide-isolated, ion implanted Schottky TTL process
- Switching specification guaranteed over the full temperature and  $V_{CC}$  range
- PNP inputs to reduce input loading
- Input hysteresis to improve noise margin
- Functionally and pin-for-pin compatible with AM29827 and SN74ALS29827
