781217-01 (PXI RF Analog Signal Generator) Add to Cart

INR 1,566,700.00

PXIe, 6.6 GHz, PXI RF Analog Signal Generator - The PXIe-5652 features continuous-wave generation capabilities with FM, 2-FSK, or OOK modulation. It uses direct digital synthesis (DDS) for high-resolution frequency hopping or phase-continuous sweeping for fixture and device characterization applications. The PXIe-5652 is ideal for clocking nonstandard sample rates, such as WCDMA signals at baseband or intermediate frequency (IF). With these versatile signal generators, you can perform analog and digital modulation through the onboard DDS circuit, which gives you frequency modulation and frequency-shift keying for applications such as bit error rate test, antenna testing, or even keyless entry. You can also perform amplitude modulation using on-off keying.
