DDR 2-Amp Source / Sink V_{TT} Termination Regulator

The NCP/NCV51199 is a linear regulator designed to supply a regulated V_{TT} termination voltage for DDR–2 and DDR–3 memory applications. The regulator is capable of actively sourcing and sinking ± 2 A peak currents for DDR–2, and DDR–3 up to ± 1.5 A while regulating the V_{TT} output voltage to within ± 10 mV. The output termination voltage is regulated to track V_{DDQ} / 2 by two external voltage divider resistors connected to the PV_{CC}, GND, and V_{REF} pins.

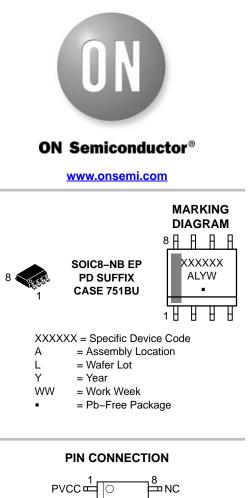

The NCP/NCV51199 incorporates a high-speed differential amplifier to provide ultra-fast response to line and load transients. Other features include source/sink current limiting, soft-start and on-chip thermal shutdown protection.

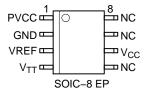

Features

- Supports DDR-2 V_{TT} Termination to ± 2 A, DDR-3 to ± 1.5 A (peak)

PIN FUNCTION DESCRIPTION

| Pin No. | Pin Name | Description |
|---------|------------------|---|
| 1 | PV _{CC} | Input voltage which supplies current to the output pin. C_{IN} = 470 µF with low ESR. |
| 2 | GND | Common Ground |
| 3 | V _{REF} | Buffered reference voltage input equal to $\frac{1}{2}$ of V _{DDQ} and active low shutdown pin. An external resistor divider dividing down the PV _{CC} voltage creates the regulated output voltage. Pulling the pin to ground (0.15 V maximum) turns the device off. |
| 4 | V _{TT} | Regulator output voltage capable of sourcing and sinking current while regulating the output rail. C_{OUT} = 1000 µF + 10 µF ceramic with low ESR. |
| 5 | NC | True No Connect |
| 6 | V _{cc} | The V _{CC} pin is a 5 V input pin that provides internal bias to the controller. PV_{CC} should always be kept lower or equal to V _{CC} . |
| 7 | NC | True No Connect |
| 8 | NC | True No Connect |
| EP | Thermal Pad | Pad for thermal connection. The exposed pad must be connected to the ground plane using multiple vias for maximum power dissipation performance. |
