

NCN2612

6-Differential Channel 1:2 Switch for PCIe 2.0 and Display Port 1.1

The NCN2612 is a 6-Channel differential SPDT switch designed to route PCI Express Gen2 and/or DisplayPort 1.1a signals. Due to the ultra-low ON-state capacitance (4.1 pF typ) and resistance (7 Ω typ), these switches have a signal bit rate (BR) of 5 Gbps, ideal for high frequency data signals. This switch pinout is designed to be used in ATX form factor desktop PCs and is available in a space-saving WQFN package. The NCN2612 uses 80% less quiescent power than other comparable PCIe switches.

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.
