

# 3.3 V/5 V ECL 8-Bit Serial/Parallel Converter

## MC100EP445

### Description

The MC100EP445 is an integrated 8-bit differential serial to parallel data converter with asynchronous data synchronization. The device has two modes of operation. CKSEL HIGH mode is designed to operate NRZ data rates of up to 3.3 Gb/s, while CKSEL LOW mode is designed to operate at twice the internal clock data rate of up to 5.0 Gb/s. The conversion sequence was chosen to convert the first serial bit to Q0, the second bit to Q1, etc. Two selectable differential serial inputs, which are selected by SINSEL, provide this device with loop-back testing capability. The MC100EP445 has a SYNC pin which, when held high for at least two consecutive clock cycles, will swallow one bit of data shifting the start of the conversion data from  $D_n$  to  $D_{n+1}$ . Each additional shift requires an additional pulse to be applied to the SYNC pin.

Control pins are provided to reset and disable internal clock circuitry. Additionally,  $V_{BB}$  pin is provided for single-ended input condition.

The 100 Series contains temperature compensation.

### Features

- 1530 ps Propagation Delay
- 5.0 Gb/s Typical Data Rate for CLKSEL LOW Mode
- Differential Clock and Serial Inputs
- $V_{BB}$  Output for Single-Ended Input Applications
- Asynchronous Data Synchronization (SYNC)
- Asynchronous Master Reset (RESET)
- PECL Mode Operating Range:  $V_{CC} = 3.0\text{ V}$  to  $5.5\text{ V}$  with  $V_{EE} = 0\text{ V}$
- NECL Mode Operating Range:  $V_{CC} = 0\text{ V}$  with  $V_{EE} = -3.0\text{ V}$  to  $-5.5\text{ V}$
- Open Input Default State
- CLK ENABLE Immune to Runt Pulse Generation
- These Devices are Pb-Free and are RoHS Compliant

APPLICATION INFORMATION

The MC100EP445 is an integrated 1:8 serial to parallel converter with two modes of operation selected by CKSEL (Pin 7). CKSEL HIGH mode only latches data on the rising edge of the input CLK and CKSEL LOW mode latches data on both the rising and falling edge of the input CLK. CKSEL LOW is the open default state. Either of the two differential input serial data path provided for this device, SINA and SINB, can be chosen with the SINSEL pin (pin 25). SINA is the default input path when SINSEL pin is left floating. Because of internal pull-downs on the input pins, all input pins will default to logic low when left open.

The two selectable serial data paths can be used for loop-back testing as well as the bit error testing.

Upon power-up, the internal flip-flops will attain a random state. To synchronize multiple flip-flops in the device, the Reset (pin 1) must be asserted. The reset pin will disable the internal clock signal irrespective of the CKEN state (CKEN disables the internal clock circuitry). The device will grab the first stream of data after the falling edge of RESET<sup>①</sup>, followed by the falling edge of CLK<sup>②</sup>, on second rising edge of CLK<sup>③</sup> in either CKSEL modes. (See Figure 6)

Figure 7. Reset Timing Diagram

# MC100EP445

For CKSEL LOW operation, the data is latched on both the rising edge and the falling edge of the clock and the time from when the serial data is latched<sup>①</sup> to when the data is seen on the parallel output<sup>②</sup> is 6 clock cycles (see Figure 8).

Figure 8. Timing Diagram A. 1:8 Serial to Parallel Conversion with CKSEL LOW

# MC100EP445

Similarly, for CKSEL HIGH operation, the data is latched only on the rising edge of the clock and the time from when the serial data is latched<sup>①</sup> to when the data is seen on the parallel output<sup>②</sup> is 12 clock cycles (see Figure 9).

Figure 9. Timing Diagram A. 1:8 Serial to Parallel Conversion with CKSEL HIGH

# MC100EP445

To allow the user to synchronize the output byte data correctly, the start bit for conversion can be moved using the SYNC input pin (pin 2). Asynchronously asserting the SYNC pin will force the internal clock to swallow a clock pulse, effectively shifting a bit from the  $Q_n$  to the  $Q_{n-1}$  output as shown in Figure 10 and Figure 11. For CKSEL LOW, a single pulse applied asynchronously for two consecutive

clock cycles shifts the start bit for conversion from  $Q_n$  to  $Q_{n-1}$ . The bit is swallowed following the two clock cycle pulse width of SYNC<sup>①</sup> on the next triggering edge of clock<sup>②</sup> (either on the rising or the falling edge of the clock). Each additional shift requires an additional pulse to be applied to the SYNC pin. (See Figure 10)

Figure 10. Timing Diagram A. 1:8 Serial to Parallel Conversion with SYNC Pulse at CKSEL LOW

# MC100EP445

For CKSEL HIGH, a single pulse applied asynchronously for three consecutive clock cycles shifts the start bit for conversion from  $Q_n$  to  $Q_{n-1}$ . The bit is swallowed following the three clock cycle pulse width of SYNC<sup>①</sup> on the next

triggering edge of clock<sup>②</sup> (on the rising edge of the clock only). Each additional shift requires an additional pulse to be applied to the SYNC pin. (See Figure 11)

Figure 11. Timing Diagram A. 1:8 Serial to Parallel Conversion with SYNC Pulse at CKSEL HIGH

## MC100EP445

The synchronous  $\overline{\text{CKEN}}$  (pin 3) applied with at least one clock cycle pulse length will disable the internal clock signal. The synchronous  $\overline{\text{CKEN}}$  will suspend all of the device activities and prevent runt pulses from being generated. The rising edge of  $\overline{\text{CKEN}}$  followed by the falling

edge of CLK will suspend all activities. The first data bit will clock on the rising edge, since the falling edge of  $\overline{\text{CKEN}}$  followed by the falling edge of the incoming clock triggers the enabling of the internal process. (See Figure 12)

**Figure 12. Timing Diagram with CKEN with CKSEL HIGH**

The differential PCLK output (pins 22 and 23) is a word framer and can help the user to synchronize the parallel data outputs. During CKSEL LOW operation, the PCLK will provide a divide by 4-clock frequency, which frames the serial data in period of PCLK output. Likewise during CKSEL HIGH operation, the PCLK will provide a divide by 8-clock frequency.

The  $V_{\text{BB}}$  pin, an internally generated voltage supply, is available to this device only. For single-ended input

conditions, the unused differential input is connected to  $V_{\text{BB}}$  as a switching reference voltage.  $V_{\text{BB}}$  may also rebias AC coupled inputs. When used, decouple  $V_{\text{BB}}$  and  $V_{\text{CC}}$  via a  $0.01 \mu\text{F}$  capacitor, which will limit the current sourcing or sinking to  $0.5\text{mA}$ . When not used,  $V_{\text{BB}}$  should be left open. Also, both outputs of the differential pair must be terminated ( $50 \Omega$  to  $V_{\text{TT}} = V_{\text{CC}} - 2 \text{V}$ ) even if only one output is used.

ON Semiconductor and are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. ON Semiconductor does not convey any license under its patent rights nor the rights of others.

**onsemi**, **Onsemi**, and other names, marks, and brands are registered and/or common law trademarks of Semiconductor Components Industries, LLC dba "**onsemi**" or its affiliates and/or subsidiaries in the United States and/or other countries. **onsemi** owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of **onsemi**'s product/patent coverage may be accessed at [www.onsemi.com/site/pdf/Patent-Marking.pdf](http://www.onsemi.com/site/pdf/Patent-Marking.pdf). **onsemi** reserves the right to make changes at any time to any products or information herein, without notice. The information herein is provided "as-is" and **onsemi** makes no warranty, representation or guarantee regarding the accuracy of the information, product features, availability, functionality, or suitability of its products for any particular purpose, nor does **onsemi** assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using **onsemi** products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by **onsemi**. "Typical" parameters which may be provided in **onsemi** data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. **onsemi** does not convey any license under any of its intellectual property rights nor the rights of others. **onsemi** products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use **onsemi** products for any such unintended or unauthorized application, Buyer shall indemnify and hold **onsemi** and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that **onsemi** was negligent regarding the design or manufacture of the part. **onsemi** is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
