

General Description

The QPA9426 is a high-linearity two-stage power amplifier in a low-cost surface-mount package with on-chip bias control and temperature compensation circuits, suitable for small cell base station applications.

QPA9426 provides 34 dB gain and +27 dBm linear power over the 2.5 – 2.7 GHz frequency range which includes 3GPP bands 7, 38 & 41. The amplifier is able to achieve -47 dBc ACLR at +27 dBm output power using 20 MHz LTE signal.

The QPA9426 integrates two high performance amplifier stages onto a module to allow for a compact system design and requires very few external components for operation. The amplifier is bias adjustable allowing the amplifier's power consumption to be optimized. The QPA9426 is available in a lead-free/RoHS-compliant 7 x 7 mm surface mount package.
