

Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All recreations are done with the approval of the OCM.

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceed the OCM data sheet.

GENERAL DESCRIPTION

The AMD 82C54 is a high-performance, CMOS version of the industry-standard 8254 counter/timer which is designed to solve the timing-control problems common in microcomputer system design. It provides three independent 16-bit Counters — each capable of handling clock inputs up to 12.5 MHz. All modes are software-programmable. The 82C54 is pin-compatible with the NMOS 8254 and is a superset of the 8253.

Six programmable-timer modes allow the 82C54 to be used as an event counter, elapsed time indicator, programmable one-shot, and in many other applications as well.

The 82C54 is fabricated with AMD's CMOS technology providing low-power consumption with performance equal to or greater than the equivalent NMOS product. The 82C54 is available in 24-pin DIP package.

MILITARY ORDERING INFORMATION

APL Products

AMD products for Aerospace and Defense applications are available in several packages and operating ranges. APL (Approved Products List) products are fully compliant with MIL-STD-883C requirements. The order number (Valid Combination) for APL products is formed by a combination of:

- a. **Device Number**
- b. **Speed Option** (if applicable)
- c. **Device Class**
- d. **Package Type**
- e. **Lead Finish**

Valid Combinations	
82C54	/BJA
82C54-2	
82C54-12	

Valid Combinations

Valid Combinations list configurations planned to be supported in volume for this device. Consult the local AMD sales office to confirm availability of specific valid combinations or to check for newly released valid combinations.

Group A Tests

Group A tests consist of Subgroups 1, 2, 3, 7, 8, 9, 10, 11.

ABSOLUTE MAXIMUM RATINGS

OPERATING RANGES

Storage Temperature -65 to +150°C
 Voltage on Any Pin
 with Respect to GND -0.5 to +7.0 V
 Power Dissipation 1 W

Military (M) Devices
 Temperature (T_C) -55 to +125°C
 Supply Voltage (V_{CC}) 5 V ±10%

Stresses above those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent device failure. Functionality at or above these limits is not implied. Exposure to absolute maximum ratings for extended periods may affect device reliability.

Operating ranges define those limits between which the functionality of the device is guaranteed.
