ESD Caution – Handling

Static electricity may be discharged through this disk subsystem. In extreme cases, this may temporarily interrupt the operation or damage components. To prevent this, make sure you are working in an ESD-safe environment. For example, before handling the disk subsystem, touch a grounded device, such as a computer case, prior to handling.

1. GENERAL DESCRIPTION

1.1. Overview

SMART's INDUSTRIAL GRADE eUSB Drive is a robust SLC flash based hard drive designed for use as the main boot and storage device for embedded systems. The small form factor, low power consumption and fast access time are important advantages a SMART eUSB Drive has over traditional hard drives. The drive uses a USB 2.0 High Speed serial link providing a simple two wire signaling interface to the host.

The SMART eUSB Drive is available in capacities ranging from 1 GB to 4 GB, Commercial or Industrial temperature, and 3.3V or 5V power. The drive is capable of sustained read speeds up to 35 MB/s and writes speeds up to 24 MB/s. The time to access a random location is typically less than 1 ms for the drive.

SMART has built its foundation by providing proven technology and quality products to the most demanding Fortune 100 OEMs. SMART engineers its products to perform at the highest degree of reliability & compatibility while backing these products with outstanding services and technology expertise.
