

Low-Rdc And High-Impedance Multilayer Chip Beads For Signal Lines

MMZ Series 0402 Type

Conforming to RoHS Directive

Conformity to RoHS Directive: This means that, in conformity with EU Directive 2002/95/EC, lead, cadmium, mercury, hexavalent chromium, and specific bromine-based flame retardants, PBB and PBDE, have not been used, except for exempted applications.

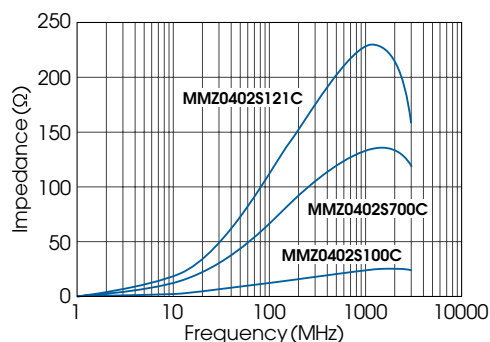

Development concept/Features and advantages

Multilayer chip beads of the world's smallest* 0402 type for downsized, lighter, and stronger advanced the latest-condensed circuit such as the PA modules of cellular phones.

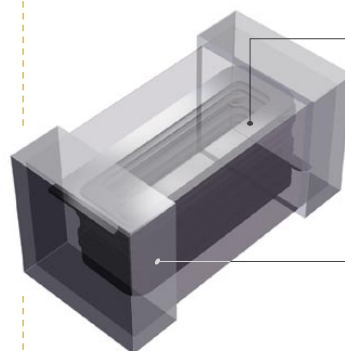

*As of April 30, 2010 (based on our survey)

The MMZ Series trademark EMI suppression and low Rdc performance have, of course, managed to maintain position as the world's topnotch standard.

TDK-EPC original material S type designed for chip beads, which is recognized for its "effectiveness", offers a line-up of three impedance frequency characteristics for the high-loss effect of resistivity in the 50-700MHz band. It allows selection of an optimal EMI depressing effect depending on developmental noise and signal waveforms.

Also, with advanced lamination process technologies accurately controlling the micro-structure of the internal conductors, the advantage of low-Rdc is maintained, reducing the electrical power loss, and driving the circuit to a minimum.

Structured with minute, low Rdc, internally laminated conductors condensed in the world's smallest chip, the product has been realized through control technology applied to submicron-order mass-production lines.

With Ni + high-purity tin-plated processed electrodes, the product complies with lead-free soldering and high-temperature re-flow processes.

Typical applications

In addition to making high-density circuit boards for cellular phones, digital camcorders, and digital cameras, the chip beads offer advantages which significantly exceed those of conventional materials, reinforcing the reliability and minimization, slimming, and weight-saving of condensed circuit units such as power amplifier modules.

Low-Rdc And High-Impedance Multilayer Chip Beads For Signal Lines

MMZ Series 0402 Type

Example of electrical characteristics

Part No.	Impedance (Ω) at 100MHz	DC resistance Rdc (Ω)	Rated current Idc (mA)
MMZ0402S100C	10 ± 5Ω	0.1 max.	500 max.
MMZ0402S700C	70 ± 25%	0.5 max.	260 max.
MMZ0402S121C	120 ± 25%	0.8 max.	210 max.

B^{material}

This super-high loss material has a crosspoint set around 5MHz where the R and X elements of the beads are equal, reducing the overshoot, undershoot, and ringing of high-speed digital signals, and possessing excellent deterrent effects on higher harmonics.

R^{material}

This material supports wide frequency ranges with broad band impedance characteristics. It is designed for digital signal lines where waveform quality is important, offering effective impedance characteristics between 10-200MHz.

S^{material}

A standard material with wide band impedance characteristics similar to those of general ferrite cores. Dedi-

cated to the signal lines of a 100MHz countermeasure band, an impedance characteristic that is effective to around 40-300MHz is provided.

Y^{material}

This material supports a wide band range and offers effective impedance characteristics around 80-400MHz and is the most suitable for signal lines where the original signal and countermeasure band stand off from one another.

A^{material}

This high impedance material is based on the impedance vs. frequency characteristics of the Y material. It has a very high impedance — over 2500Ω around 100MHz (MMZ 1608A252B).

Low-Rdc And High-Impedance Multilayer Chip Beads For Signal Lines

Information on related products

MMZ Series 0402 Type

Q material

This material supports a wide band range and provides effective impedance characteristics in the range between around 100MHz and 800MHz.

D material

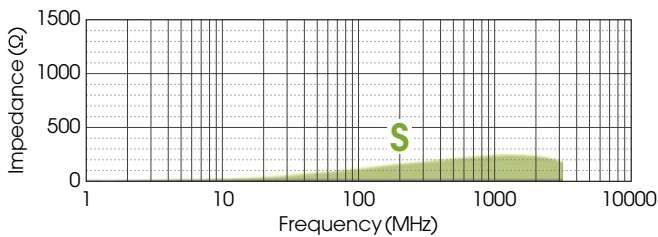

This material supports high frequency waves with low loss in the range below 50MHz and impedance values which suddenly increase from around 100MHz. It is dedicated to signal lines where pulse height value is important, offering effective impedance characteristics in the 200-500MHz range.

F material

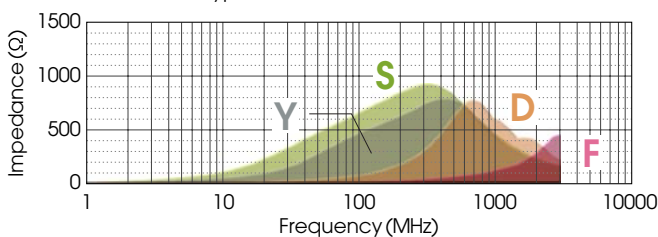

This material succeeds the D material in its characteristic steep impedance increase by further shifting the impedance peak frequency to the high-frequency (GHz band) side, offering superb noise reduction in the high-frequency range between 600MHz and GHz band.

Actual examples of applied materials' features and impedance vs. frequency characteristics tendencies

For DC power lines

MPZ Series 2012 Type

Shape: L2.0×W1.25×T0.85mm Weight: 8mg typ.

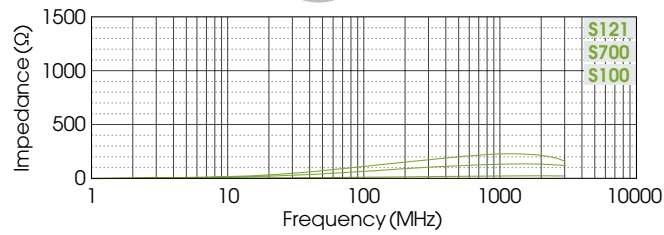

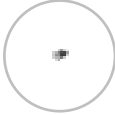

Part No.	Impedance (Ω) at 100MHz	DC resistance Rdc (Ω)	Rated current Idc (mA)
MPZ2012S300A	30±10Ω	0.01	6
MPZ2012S101A	100±25%	0.02	4
MPZ2012S221A	220±25%	0.04	3
MPZ2012S331A	330±25%	0.05	2.5
MPZ2012S601A	600±25%	0.1	2
MPZ2012S102A	1000±25%	0.15	1.5

Main products of multilayer chip beads and multilayer chip bead arrays

Impedance vs. frequency characteristics (by each material)

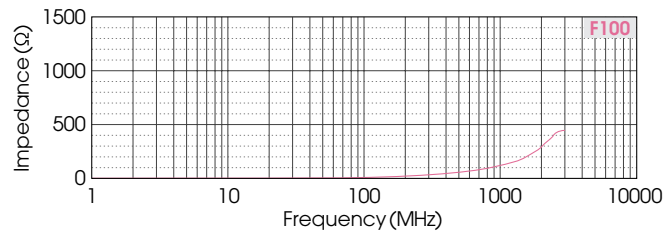

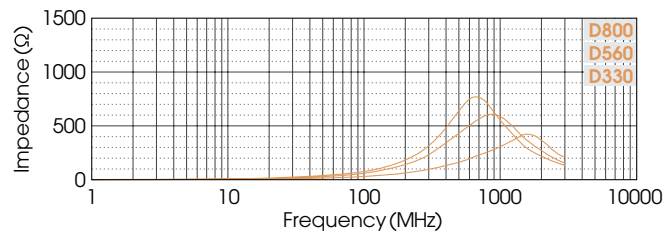

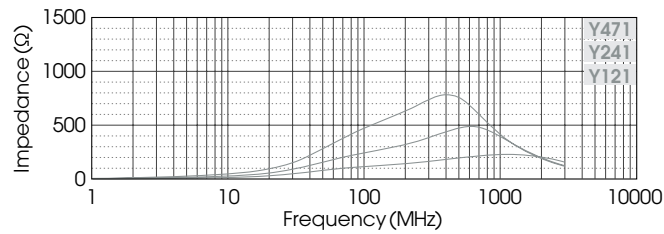

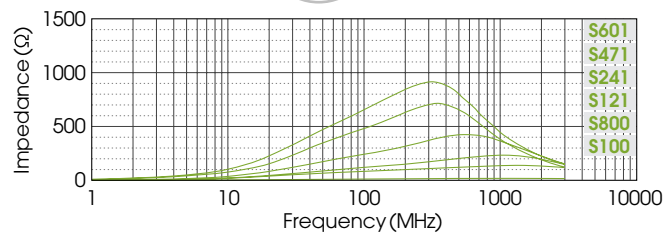

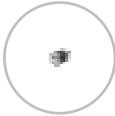

For signal lines

MMZ Series **0402** Type

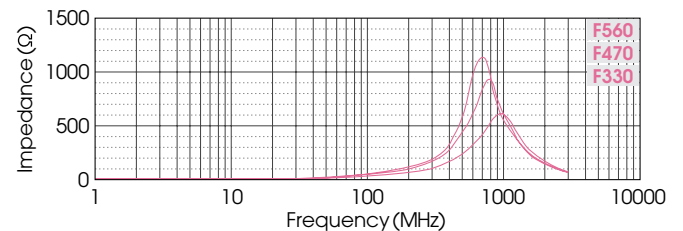

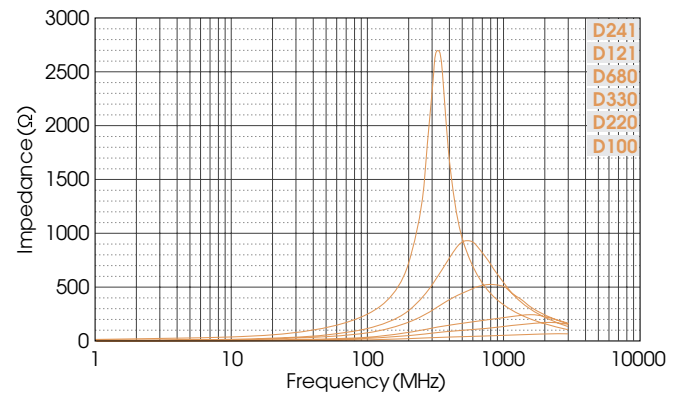

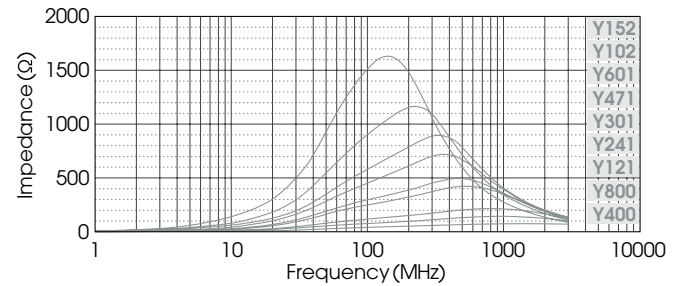

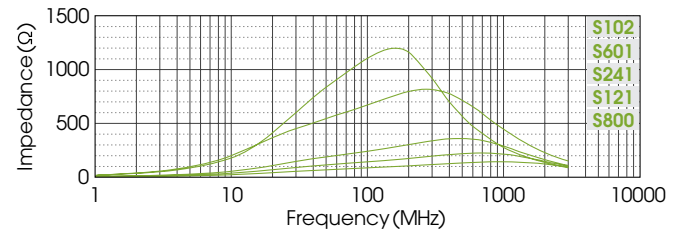

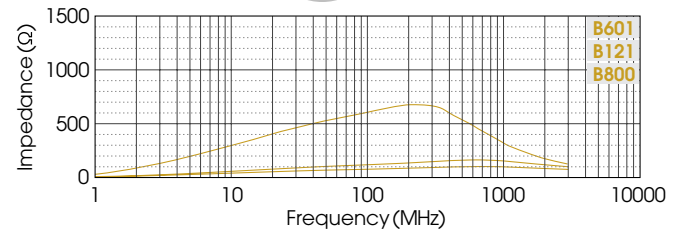

For signal lines

MMZ Series **0603** Type

For signal lines

MMZ Series **1005** Type

Low-Rdc And High-Impedance Multilayer Chip Beads For Signal Lines

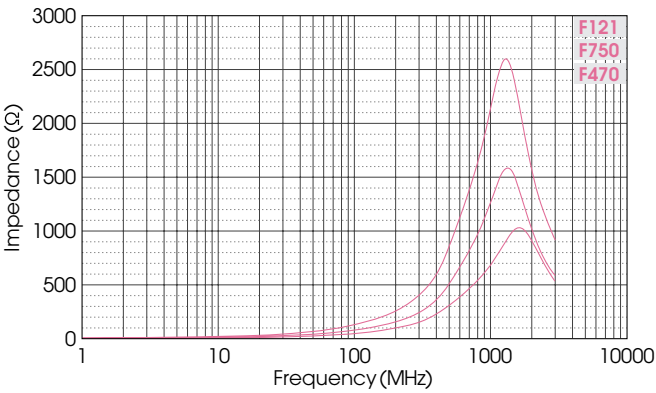

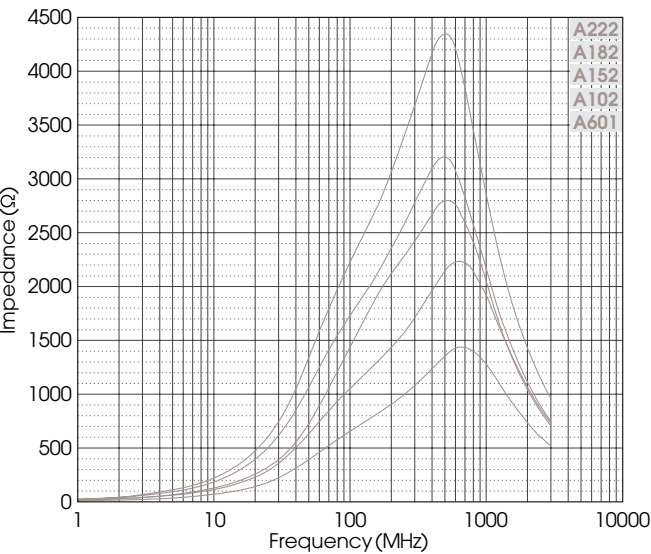

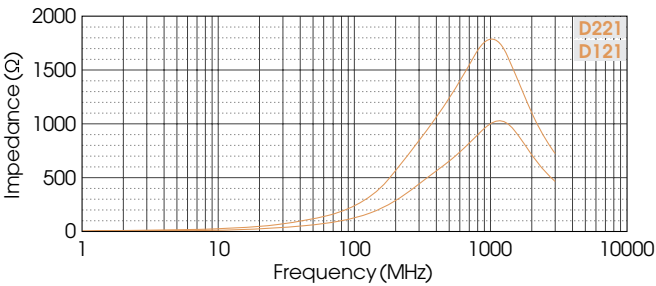

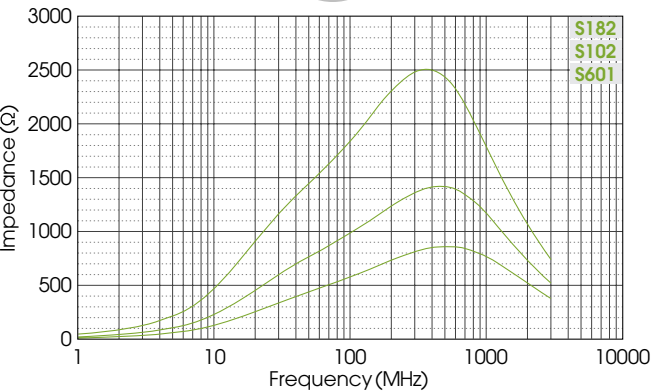

Information on related products

MMZ Series 0402 Type

For signal lines

MMZ Series 1005-E Type

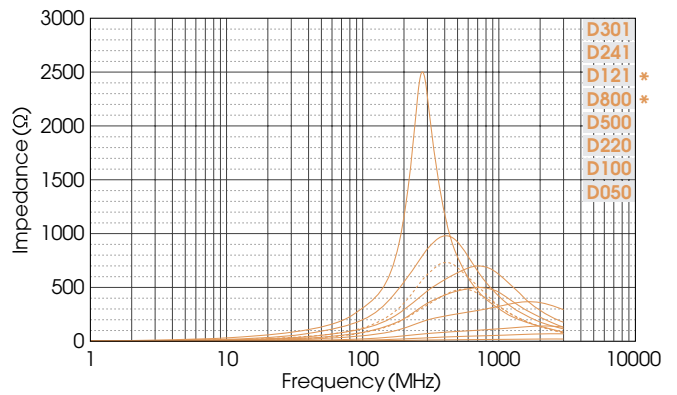

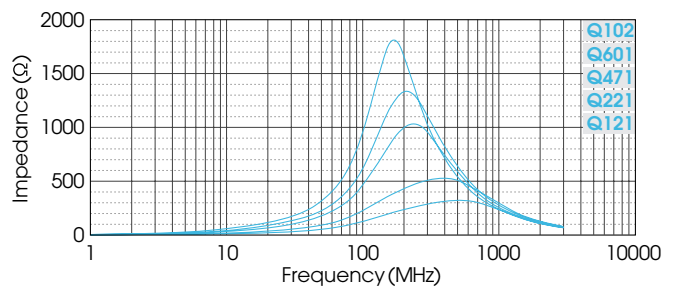

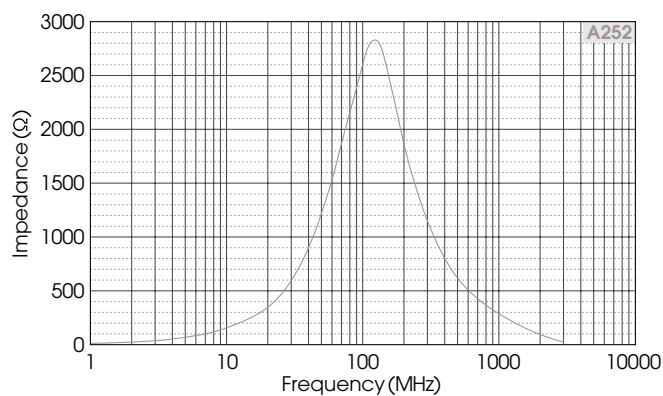

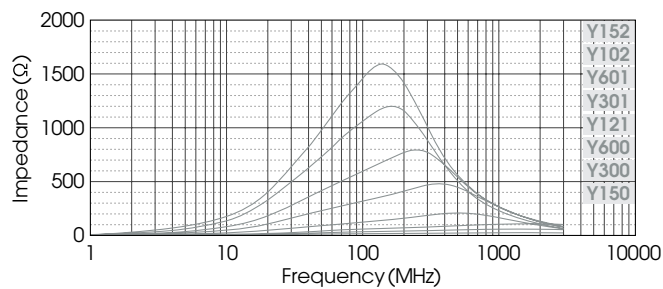

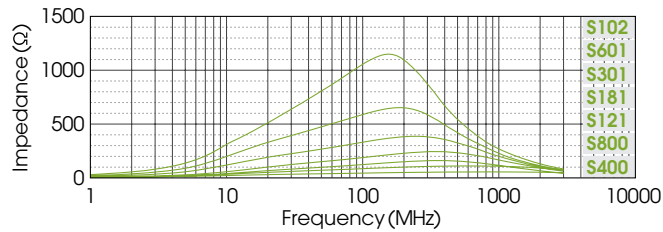

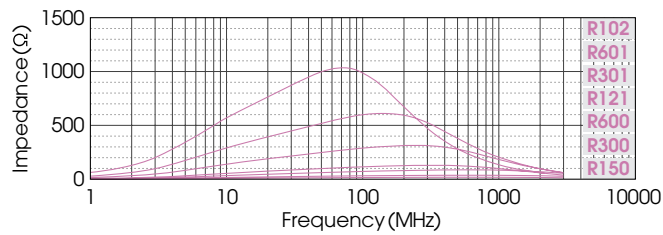

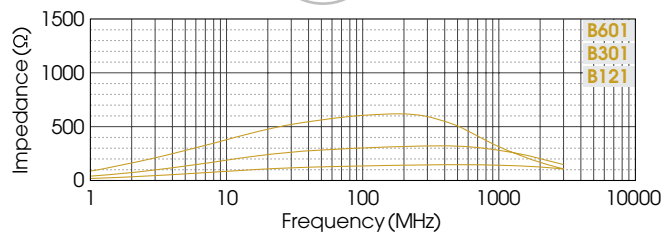

Main products of multilayer chip beads and multilayer chip bead arrays

Impedance vs. frequency characteristics (by each material)

For signal lines

MMZ Series 1608 Type

*Both D800 and D121 have two product types of different frequency characteristics and thicknesses.

Type C: 0.6mm thick

Type B: 0.8mm thick (shown as broken lines)

Low-Rdc And High-Impedance Multilayer Chip Beads For Signal Lines

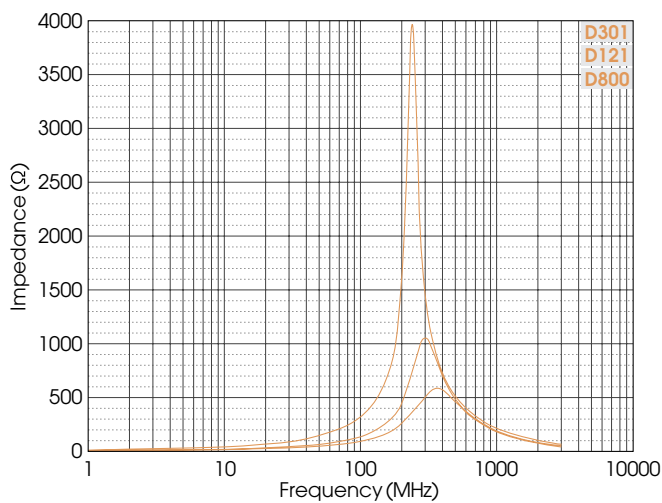

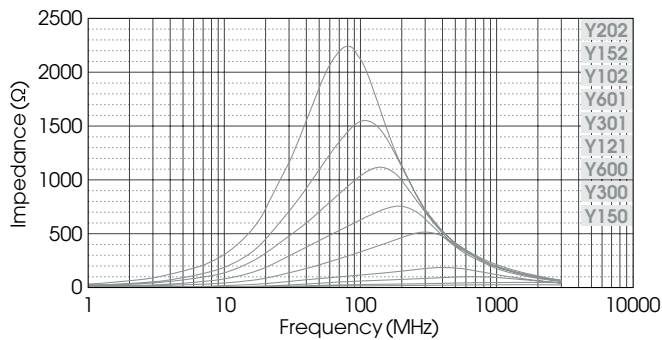

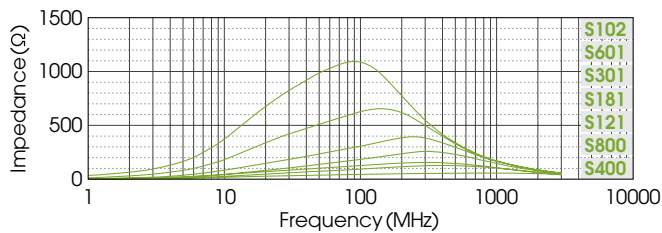

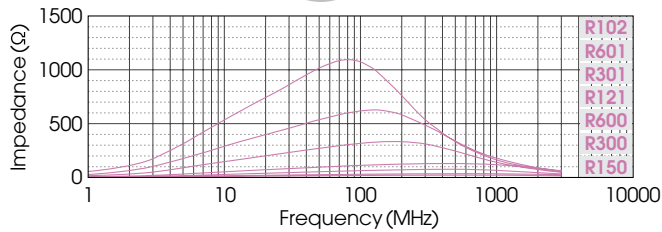

Information on related products

MMZ Series 0402 Type

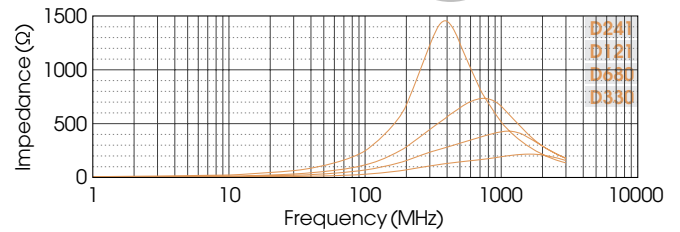

For signal lines

MMZ Series 2012 Type

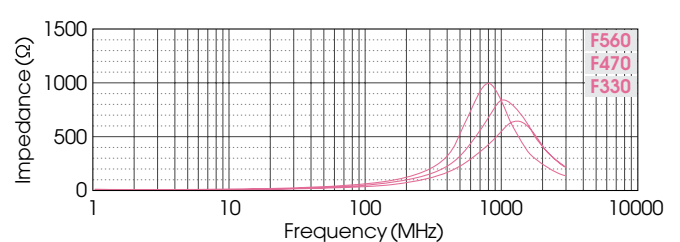

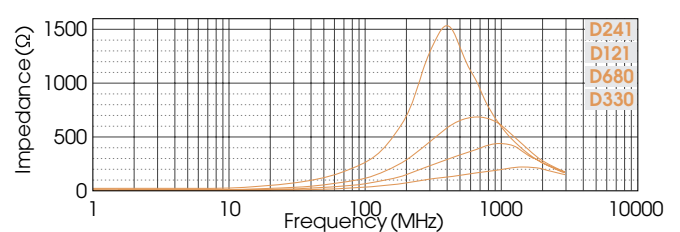

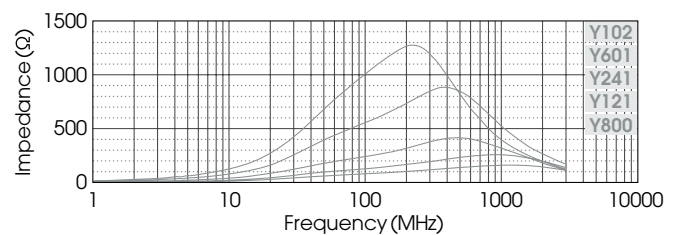

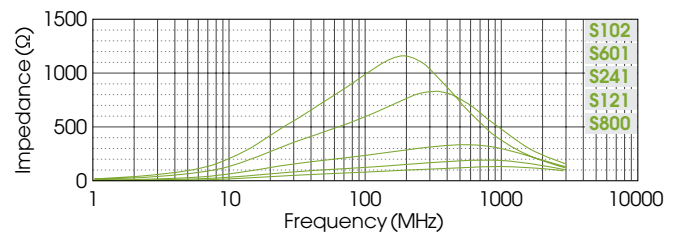

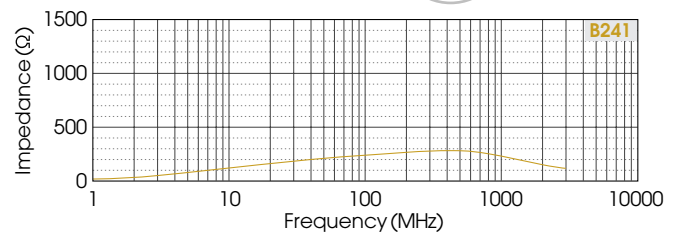

For signal lines/Arrays for 2 lines

MZA Series 1210 Type

For signal lines/Arrays for 4 lines

MZA Series 2010 Type

Main products of multilayer chip beads and multilayer chip bead arrays

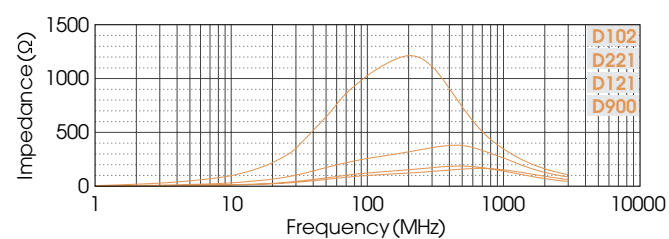

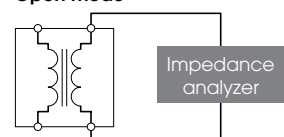

Impedance vs. frequency characteristics (by each material)

For audio lines / USB1.1 signal lines

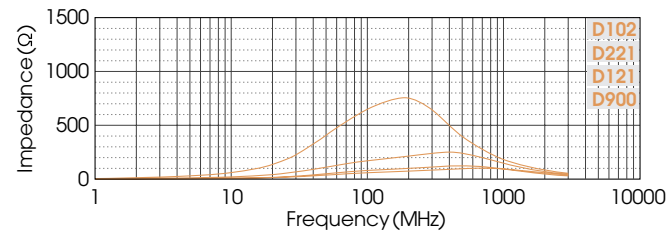

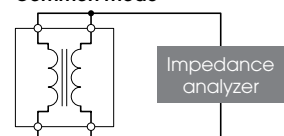

MCZ Series 1210-D Type

Open mode

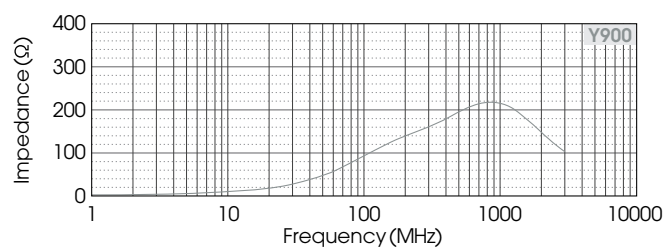

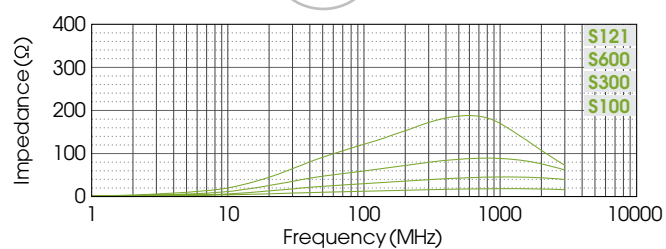

Common mode

For DC power lines

MPZ Series 1005 Type

Low-Rdc And High-Impedance Multilayer Chip Beads For Signal Lines
