

200mA Negative Voltage Regulator with ON/OFF Control

■ GENERAL DESCRIPTION

The XC6901 Series is a negative voltage CMOS regulator which includes a reference voltage source, error amplifier, driver transistor, current limiter and phase compensator.

The CE function enables the circuit to be in stand-by mode by inputting low level signal. In the stand-by mode, the electric charge at the output capacitor (C_L) will be discharged via the internal auto-discharge switch and as a result the $-V_{OUT}$ pin quickly returns to the V_{SS} level.

The over current protection circuit will operate when the output current reaches limit current. The thermal shutdown circuit will operate when the junction temperature reaches limit temperature.

■ APPLICATIONS

- CCD power supplies
- LCD Modules
- Op-Amp power supplies
- Digital still cameras
- Battery powered equipment

■ FEATURES

Maximum Output Current	: 200mA
Input Voltage Range	: -2.4V ~ -12.4V ($V_{CE}=3.6V$)
Output Voltage Range	: -0.9V ~ -12.0V
Accuracy	: $\pm 1.5\%$ ($V_{OUT} < -2.0V$) $\pm 0.03V$ ($V_{OUT} \geq -2.0V$)
Temperature Stability	: TYP. $\pm 50ppm/^{\circ}C$
CE High Level Voltage	: +1.2V ~ +3.6V, (Active High)
Dropout Voltage	: 400mV @ $I_{OUT}=100mA$
Low Power Consumption	: 100 μA MAX.
Stand-by Current	: Less than 0.1 μA
Protection Circuits	: Current Limit 350mA TYP, Foldback Overheat Protection $T_{TSB}=150^{\circ}C$
Output Capacitor	: Ceramic Capacitor Compatible
Built-in Function	: C_L High-Speed Discharge
Operating Ambient Temperature	: $-40^{\circ}C \sim +85^{\circ}C$
Packages	: SOT-25, SOT-89-5, USP-6C
Environmentally Friendly	: EU RoHS Compliant, Pb Free

■ TYPICAL APPLICATION CIRCUIT

■ TYPICAL PERFORMANCE CHARACTERISTICS

PIN CONFIGURATION

* The dissipation pad for the USP-6C package should be solder-plated in recommended mount pattern and metal masking to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the -V_{IN} (No. 3) pin.

PIN ASSIGNMENT

PIN NUMBER			PIN NAME	FUNCTIONS
USP-6C	SOT-25	SOT-89-5		
1	5	5	-V _{OUT}	Negative Output
2,5	4	1	NC	No Connection
3	2	2	-V _{IN}	Negative Supply Input
4	3	3	CE	ON/OFF Control
6	1	4	GND	Ground

NOTE: Unless otherwise stated regarding input voltage conditions $V_{CE}=1.5V, GND=0V, V_{IN}=V_{OUT(T)}-1.0V$ or $-2.4V$ the one which bigger absolute value.

*1) $V_{OUT(T)}$: Nominal output voltage

*2) $V_{OUT(E)}$: Effective output voltage (see the voltage chart)

(ie. The output voltage when " $V_{OUT(T)}-1.0V$ " or " $-2.4V$ " is provided at the V_{IN} pin while maintaining a certain I_{OUT} value.

*3) $V_{dif} = -\{V_{IN1} - V_{OUT1}\}$

V_{IN1} is the input voltage when V_{OUT1} appears at the V_{OUT} pin while input voltage is gradually increased

V_{OUT1} is the voltage equal to 98% of the normal output voltage when amply stabilized $V_{OUT(T)}-1.0V$ or $-2.4V$ (the bigger absolute value one) are input at the V_{IN} pin.

*4) The maximum current may not be able to flow when thermal shutdown operates, it depends on power dissipation.

*5) E-1: Refer to dropout voltage chart.

■ TEST CIRCUITS

1) CIRCUIT①

2) CIRCUIT②

3) CIRCUIT③

OPERATIONAL EXPLANATION

The voltage divided by resistors R1 and R2 is compared with the internal reference voltage based on ground by the error amplifier. The driver transistor tied to the $-V_{IN}$ pin is then driven by the subsequent output signal. The output voltage at the $-V_{OUT}$ pin is controlled and stabilized by a system of negative feedback.

<Soft Start Function>

XC6901 Series includes soft-start circuit. During power start-up, the inrush current from $-V_{IN}$ pin to V_{OUT} pin to charge C_L capacitor can be reduced and it makes the V_{IN} stable. Soft-start time (t_{SS}) is optimized internally.

Figure1 : Soft Start Time and Inrush Current

<Current Limit, Short-Circuit Protection>

The XC6901 series' fold-back circuit operates as an output current limiter and a short protection circuit for the output pin. When the output current reaches the current limit level, output voltage drops with the decrease of the output current. There are no parasitic diode between the $-V_{OUT}$ pin and GND pin. The minimized short-circuit current is maintained even if the $-V_{OUT}$ pin voltage is pulled up toward positive.

<Thermal Shutdown>

The XC6901 Series has an internal thermal Shutdown(TSD) circuit for protection against overheating. When the junction temperature reaches the detection temperature, the driver transistor is forcibly turned off. When the junction temperature falls to the release temperature with the driver transistor still in the off state, the driver transistor turns on (automatic recovery) and restarts regulator operation.

<CE Pin>

The XC6901 Series is able to shut down the regulator circuit using the CE pin signal. CE pin can be controlled with positive voltage due to P-channel transistor source input (Gate is grounded). A current flow of a few micro amperes. The regulator is turned on when CE input voltage is positive, the regulator is turned off when CE input is GND.

When CE pin is open, IC is turned OFF, due to the built-in Pull-down resistor. When the IC is turned OFF with low input voltage to the CE pin, $-V_{OUT}$ pin voltage goes into GND level by R1, R2 and CL discharge resistance(R_{DCHG}).

■ OPERATIONAL EXPLANATION(Continued)

<C_L High Speed Discharge>

The XC6901D type is capable of high-speed discharge of the charge that collects on the output capacitor (C_L below). This is accomplished by the P-channel MOSFET and C_L discharge resistance connected between the -V_{OUT} and GND pins in the block diagram, and takes place when the L-level signal (IC internal circuit shutdown signal) of the CE pin is input so that it could avoid malfunction.

The C_L discharge time is determined by this C_L discharge resistance and C_L. Letting the time constant of the C_L discharge resistance R_{DCHG} and C_L be τ ($\tau = C \times R$), the output voltage after discharge by the P-channel MOSFET can be obtained from the CR discharge equation below. Please be noted that R_{DCHG} varies with supply voltage and V_{DS}(drain-source voltage) since it consists of P-channel MOSFET.

$$t = \tau \ln (V_{OUT(E)} / V)$$

V: Output voltage during discharge

V_{OUT(E)}: Output voltage

t: Discharge time

τ : C_L auto-discharge resistance R_{DCHG} × C_L Output capacitor value C_L

<Low ESR Capacitor>

With the XC6901 series, a stable output voltage is achievable even if used with low ESR capacitors, as a phase compensation circuit is built-in. The output capacitor (C_L) should be connected as close to -V_{OUT} pin and GND pin to obtain stable phase compensation. Values required for the phase compensation are as the table below.

For a stable power input, please connect an input capacitor (C_{IN}) near power supply. In order to ensure the stable phase compensation while avoiding run-out of values, please use the capacitor (C_{IN}, C_L) which does not depend on bias or temperature too much. The table below shows recommended values of C_{IN}, C_L for all environment conditions.

CHART 1 : Recommended Values of C_{IN}, C_L (MIN.)

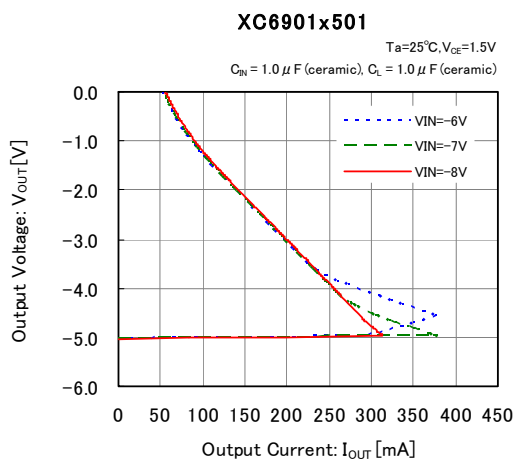

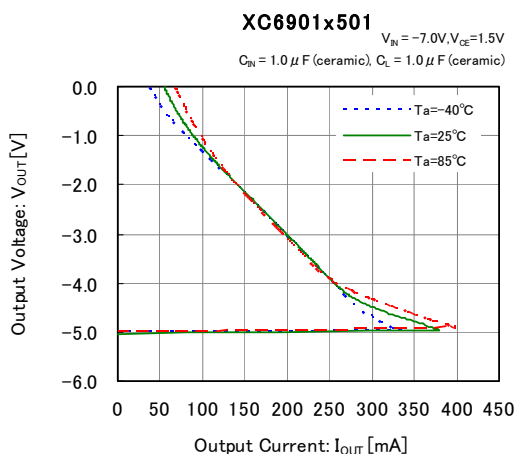

OUTPUT VOLTAGE RANGE	INPUT CAPACITOR	OUTPUT CAPACITOR
V _{OUT(T)}	C _{IN}	C _L
-0.9V~-12V	1.0 μF~	1.0 μF~100 μF

■ NOTE ON USE

- 1) For temporary, transitional voltage drop or voltage rising phenomenon. The IC is liable to malfunction should the ratings be exceeded.
- 2) Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please enforce wiring $-V_{IN}$ and GND.
- 3) Please wire the C_{IN} and C_L as close to the IC as possible.
- 4) Capacitances of these capacitors (C_{IN} , C_L) are decreased by the influences of bias voltage and ambient temperature. Care shall be taken for capacitor selection to ensure stability of phase compensation from the point of ESR influence.
- 5) Torex places an importance on improving our products and its reliability. However, by any possibility, we would request user fail-safe design and post-aging treatment on system or equipment.

Power dissipation data for the SOT-25 is shown in this page.

The value of power dissipation varies with the mount board conditions.

Please use this data as one of reference data taken in the described condition.

1. Measurement Condition (Reference data)

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm (1600 mm² in one side)
Copper (Cu) traces occupy 50% of the board area
In top and back faces
Package heat-sink is tied to the copper traces
(Board of SOT-26 is used.)
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6 mm
- Through-hole: 4 x 0.8 Diameter

2. Power Dissipation vs. Ambient temperature

Evaluation Board (Unit: mm)

Board Mount ($T_j \text{ max} = 125^\circ\text{C}$)

Ambient Temperature ($^\circ\text{C}$)	Power Dissipation Pd (mW)	Thermal Resistance ($^\circ\text{C}/\text{W}$)
25	600	166.67
85	240	

■ PACKAGING INFORMATION (Continued)

● SOT-89-5 Power Dissipation

Power dissipation data for the SOT-89-5 is shown in this page.

The value of power dissipation varies with the mount board conditions.

Please use this data as one of reference data taken in the described condition.

2. Measurement Condition (Reference data)

Condition: Mount on a board

Ambient: Natural convection

Soldering: Lead (Pb) free

Board: Dimensions 40 x 40 mm (1600 mm² in one side)

Copper (Cu) traces occupy 50% of the board area

In top and back faces

Package heat-sink is tied to the copper traces

Material: Glass Epoxy (FR-4)

Thickness: 1.6 mm

Through-hole: 5 x 0.8 Diameter

Evaluation Board (Unit: mm)

2. Power Dissipation vs. Ambient temperature

Board Mount ($T_j \text{ max} = 125^\circ\text{C}$)

Ambient Temperature ($^\circ\text{C}$)	Power Dissipation P_d (mW)	Thermal Resistance ($^\circ\text{C}/\text{W}$)
25	1300	76.92
85	520	

PACKAGING INFORMATION (Continued)

- USP-6C Power Dissipation

Power dissipation data for the USP-6C is shown in this page.

The value of power dissipation varies with the mount board conditions.

Please use this data as one of reference data taken in the described condition.

3. Measurement Condition (Reference data)

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm (1600 mm² in one side)
Copper (Cu) traces occupy 50% of the board area
In top and back faces
Package heat-sink is tied to the copper traces
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6 mm
- Through-hole: 4 x 0.8 Diameter

2. Power Dissipation vs. Ambient temperature

Board Mount ($T_j \text{ max} = 125^\circ\text{C}$)

Evaluation Board (Unit: mm)

Ambient Temperature ($^\circ\text{C}$)	Power Dissipation Pd (mW)	Thermal Resistance ($^\circ\text{C/W}$)
25	1000	100.00
85	400	

MARKING RULE

SOT-25(Under dot)

※A dot is marked below the mark of ①

SOT89-5

USP-6C

① represents product series

MARK	PRODUCT SERIES
F	XC6901*****_G

② represents output voltage range and product types

MARK	OUTPUT VOLTAGE (V)	TYPE	PRODUCT SERIES
R	-0.9 ~ -3.8	D	XC6901D091**-G ~ XC6901D381**-G
S	-3.9 ~ -6.8		XC6901D391**-G ~ XC6901D681**-G
T	-6.9 ~ -9.8		XC6901D691**-G ~ XC6901D981**-G
U	-9.9 ~ -12.0		XC6901D991**-G ~ XC6901DC01**-G

③ represents output voltage

MARK	OUTPUT VOLTAGE (V)				MARK	OUTPUT VOLTAGE (V)				MARK	OUTPUT VOLTAGE (V)			
0	-0.9	-3.9	-6.9	-9.9	A	-1.9	-4.9	-7.9	-10.9	N	-2.9	-5.9	-8.9	-11.9
1	-1.0	-4.0	-7.0	-10.0	B	-2.0	-5.0	-8.0	-11.0	P	-3.0	-6.0	-9.0	-12.0
2	-1.1	-4.1	-7.1	-10.1	C	-2.1	-5.1	-8.1	-11.1	R	-3.1	-6.1	-9.1	-
3	-1.2	-4.2	-7.2	-10.2	D	-2.2	-5.2	-8.2	-11.2	S	-3.2	-6.2	-9.2	-
4	-1.3	-4.3	-7.3	-10.3	E	-2.3	-5.3	-8.3	-11.3	T	-3.3	-6.3	-9.3	-
5	-1.4	-4.4	-7.4	-10.4	F	-2.4	-5.4	-8.4	-11.4	U	-3.4	-6.4	-9.4	-
6	-1.5	-4.5	-7.5	-10.5	H	-2.5	-5.5	-8.5	-11.5	V	-3.5	-6.5	-9.5	-
7	-1.6	-4.6	-7.6	-10.6	K	-2.6	-5.6	-8.6	-11.6	X	-3.6	-6.6	-9.6	-
8	-1.7	-4.7	-7.7	-10.7	L	-2.7	-5.7	-8.7	-11.7	Y	-3.7	-6.7	-9.7	-
9	-1.8	-4.8	-7.8	-10.8	M	-2.8	-5.8	-8.8	-11.8	Z	-3.8	-6.8	-9.8	-

④,⑤ represents production lot number

01~09, 0A~0Z, 11~9Z, A1~A9, AA~AZ, B1~ZZ repeated

(G, I, J, O, Q, W excluded)

*No character inversion used.

1. The products and product specifications contained herein are subject to change without notice to improve performance characteristics. Consult us, or our representatives before use, to confirm that the information in this datasheet is up to date.
2. We assume no responsibility for any infringement of patents, patent rights, or other rights arising from the use of any information and circuitry in this datasheet.
3. Please ensure suitable shipping controls (including fail-safe designs and aging protection) are in force for equipment employing products listed in this datasheet.
4. The products in this datasheet are not developed, designed, or approved for use with such equipment whose failure or malfunction can be reasonably expected to directly endanger the life of, or cause significant injury to, the user.
(e.g. Atomic energy; aerospace; transport; combustion and associated safety equipment thereof.)
5. Please use the products listed in this datasheet within the specified ranges.
Should you wish to use the products under conditions exceeding the specifications, please consult us or our representatives.
6. We assume no responsibility for damage or loss due to abnormal use.
7. All rights reserved. No part of this datasheet may be copied or reproduced without the prior permission of TOREX SEMICONDUCTOR LTD.
