

23-Jul-2019

PCN #:E-19-010604

Subject:ASSY,PIN,2-8mm,CRIMP

Description of Change: To increase the retention of the retaining spring on the pin, the inner diameter of the retaining spring and the outer diameter of the pin were both reduced to create a tighter fit between the spring and the pin and the height of the retention tines on the spring were increased accordingly to maintain the proper location of the tip of the retention tines with respect to the ledge in the housing that these tines make contact with.

Reason: Product Improvement. 1. Product improvement to increase the retention of the retaining spring on the pin to eliminate the possibility of the retaining spring from becoming dislodged from the pin. 2. Product improvement to ensure that all the locking tines on the retaining spring deploy properly in the housing after the pin is inserted into the housing.
