

29-Apr-2022

PCN #: P-22-022588

Subject : DMC-M modules gluing process change

Description of Change : Use of one glue to assemble hard thermoplastics and elastomeric components on the DMC-M modules and EN4165 version, instead of two presently (one for the thermoplastic to thermoplastic assembly, one for the elastomer to thermoplastic assembly). Change analyzed through the DDP 732-412, and validated by QTR (PVE732-198VA) For EN4165, the change has been submitted to the qualifying authority (ASD-CERT). The change has been approved by the authority.

Reason : Product improvement. TE Evreux has highlighted an opportunity to improve its DMC-M module assembly process (gluing) by replacing the two elastomeric glues presently used by a single epoxy glue.

This change reduces the numbers of steps in the process and will help to reduce the lead time.

The dates on the product change notification (PCN) are best estimate dates determined at the time of issuance. Actual implementation dates may vary from such dates.

The change described in the PCN can be withdrawn, without notice, for any or all of the products identified on the PCN.

TE Connectivity corporate policy is for PCNs to be valid for 60 days and obsolescence notices to be valid for 180 days after date of issue.

For confirmation or additional information on the change, please contact the TE Connectivity Product Information Center at 800-522-6752 or your TE Connectivity Sales Representative.

Alert document created by IHS Markit based on content provided by TE Connectivity.
