PCN #:P-11-004057

Subject:AMPSEAL plug assembly

Description of Change: The 23 and 35 position plug assemblies are being moved to an automatic machine for seal presence inspection and date coding. The assemblies will be on the automatic process from 9 June 2011 through approximately 8 July 2011. The date code will be changed from a hot stamp to a laser etched, the location will change to the shroud and the size will increase. The larger date code will be the visual indicator that the assemblies are from the automatic machine. All assemblies produced for the first week will be placed on safe launch inspection.

Reason: The current semi-automatic inspection and date code machine for the 23 and 35 position AMPSEAL Plug assembly is in need of repair. This repair will take approximately 4 weeks

Impact of Change:form - fit - function
