INTRODUCTION

Model CSM3637F is a surface mount chip resistor designed with 4 pads for Kelvin connection. Utilizing Bulk Metal® Foil as the resistance element, it provides enhanced characteristic capabilities resulting in superior performance when compared with other resistor technologies. The unique combination of Z Foil technology along with the designed 4 pads lead frame configuration results in significant reduction of the component's sensitivity to applied power changes such as power coefficient of resistance (PCR) and thermal resistance.

ABOUT CSM3637F

The CSM3637F is a current sensing solution that was developed with a low TCR to meet demands for stable resistive product solutions in the industry. As it is critical for this resistor to reach thermal equilibrium quickly in circuits that require fast response or where the current changes swiftly, the CSM3637F is used where the emphasis is on accuracy and repeatability under stress conditions in applications requiring precision resistor performance up to 3 W. Applications as EB systems, switching power supplies, force-balanced scales all rely on current sense resistors to develop a precise voltage proportional to the current.

The 4-pad CSM3637F Bulk Metal® Foil surface mount resistor features an improved load-life stability of max $\pm 0.05\%$ at $+70^{\circ}\text{C}$ for 2000 h (rated power), a TCR of $\pm 5 \text{ ppm}/^{\circ}\text{C}$ maximum from -55°C to $+125^{\circ}\text{C}$, $+25^{\circ}\text{C}$ ref., and a tolerance of $\pm 0.1\%$.

The Key Applications

Applications requiring accuracy and repeatability under stress conditions such as the following:

- Switching and linear power supplies
- Precision current-sensing
- Power management systems
- Feedback circuits
- Power amplifiers
- Measurement instrumentation
- Precision instrumentation amplifiers
- Medical and automatic test equipment
- Satellites and aerospace systems
- Commercial and Military avionics
- Test and measurement equipment
- Electronic scales
