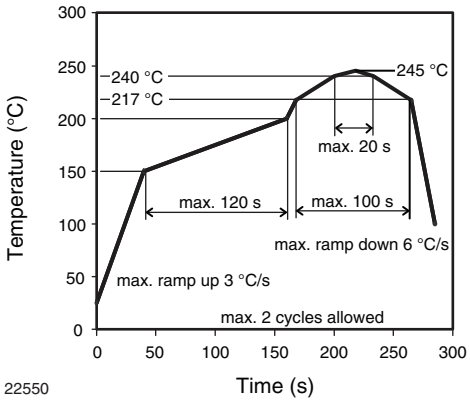
SOLDERING GUIDLINES

Soldering Condition

The CNY651AxST are lead (Pb)-free devices. They are suitable for reflow soldering. However due to large package size, the peak package body temperature should not go above 245 °C.



Drypack

These devices have a moisture sensitivity level MSL4 thus they are packed in moisture barrier bags (MBB) to prevent moisture absorption during transportation and storage. Each bag contains a desiccant bag.

Floor Life

Floor life (time between soldering and removing from MBB) must not exceed the time indicated on MBB label:

Floor life: 72 h

Conditions: T_{amb} < 30 °C, RH < 60 %

Moisture sensitivity level 4, according to J-STD-020.

Drying

In case of moisture absorption devices should be baked before soldering according to the recommended conditions shown below

48 h at 125 °C ± 5 °C, RH < 5%

(Not suitable for tape and reel)

In case the floor time has not exceeded 10 days the units can be baked in tape and reel according to the following conditions

168 h at 60 °C ± 5 °C, RH < 5 %

(Not suitable, if the floor time was exceeded by more than 10 days, or the allowed factory condition is exceeded)

CNY651 - DIP version device cannot go through reflow soldering hence wave soldering should be used. See absolute maximum ratings for soldering specifications.
