### DESCRIPTION

The ILD621, ILQ621, ILD621GB, ILQ621GB are multi-channel phototransistor optocouplers that use GaAs IRED emitters and high gain NPN silicon phototransistors. These devices are constructed using double molded insulation technology.

The ILD621, ILQ621GB is well suited for CMOS interfacing given the  $CTR_{CEsat}$  of 30 % minimum at  $I_F$  of 1.0 mA. High gain linear operation is guaranteed by a minimum  $CTR_{CE}$  of 100 % at 5.0 mA. The ILD621, ILQ621 has a guaranteed  $CTR_{CE}$  50 % minimum at 5.0 mA. The transparent ion shield insures stable DC gain in applications such as power supply feedback circuits, where constant DC  $V_{IO}$  voltages are present.
